 Springer

# **Wireless Networks**

## **Series Editor**

Xuemin Sherman Shen, University of Waterloo, Waterloo, ON, Canada

The purpose of Springer's Wireless Networks book series is to establish the state of the art and set the course for future research and development in wireless communication networks. The scope of this series includes not only all aspects of wireless networks (including cellular networks, WiFi, sensor networks, and vehicular networks), but related areas such as cloud computing and big data. The series serves as a central source of references for wireless networks research and development. It aims to publish thorough and cohesive overviews on specific topics in wireless networks, as well as works that are larger in scope than survey articles and that contain more detailed background information. The series also provides coverage of advanced and timely topics worthy of monographs, contributed volumes, textbooks and handbooks.

# Preface

## **Motivation of This Book**

Wireless signals play a crucial role in communication for people's daily lives. Without wireless signals, for example, Wi-Fi, Bluetooth, and radio-frequency identification (RFID) signals, people may not enjoy those convenient and joyful services. In the last decade, apart from the communication function, researchers have shown that wireless signals provide a new paradigm for sensing human activities and objects. Wireless sensing has many benefits and advantages over traditional sensing approaches. First, wireless devices are prevalent almost everywhere. Using existing wireless infrastructures can provide a ubiquitous and cost-effective way for sensing. Second, wireless sensing can be non-intrusive. People can get rid of the traditional bulky sensors and avoid being monitored by the camera.

The primary motivation of this book is to provide a comprehensive summary of common principles of wireless sensing, a systematic study about challenging issues in complex and practical scenarios, and critical solutions to tackle these challenges. In particular, we first present a systematic introduction for the development and the vision of wireless sensing technology. Second, we provide a comprehensive study about wireless signals, sensing principles, and applications. Third, we discuss the challenges of putting wireless sensing into tangible and practical use. Then, we introduce methods to tackle the challenging issues in wireless sensing. Finally, we share our experiences in designing wireless sensing systems for several essential applications.

## **What This Book Is About**

This book provides comprehensive reviews of the wireless sensing technology, including the types of wireless signals used for sensing, the general principles and approaches for wireless sensing, the information that wireless signals can sense, and the key applications. This book presents an investigation of the critical challenges that need to be alleviated to achieve wireless sensing in complex and practical scenarios and how to tackle these challenges with concrete case studies

and examples. The book can be seen as a textbook and a practical guide for the reader.

### **How This Book Is Organized**

This book is divided into six chapters:

**Chapter 1: “Introduction”.** This chapter introduces motivations, basics, applications, and the framework of wireless sensing.

**Chapter 2: “Wireless Signals and Signal Processing”.** This chapter introduces different kinds of wireless signals and signal processing methods utilized for wireless sensing.

**Chapter 3: “Wireless Sensing System Configurations”.** This chapter introduces and compares different configurations of wireless devices in wireless sensing systems.

**Chapter 4: “Wireless Sensing Methodologies”.** This chapter introduces and discusses representative methodologies to obtain sensing information from wireless signals.

**Chapter 5: “Case Studies”.** This chapter showcases representative case studies of applying wireless sensing for different applications, including human respiration monitoring, exercise monitoring, and liquid sensing.

**Chapter 6: “Conclusion”.** This chapter provides the summary and future directions of wireless sensing.

# Acknowledgments

The authors are deeply grateful to the research staff and students in our research group for their hard work in developing wireless sensing systems and applications. We express our thanks to Dr. Xuefeng Liu, Dr. Xiulong Liu, Dr. Zhuo Li, Dr. Yanwen Wang, Dr. Shan Jiang, Mr. Jiuwu Zhang, and Mr. Jinlin Chen. The financial support from the Hong Kong RGC Research Impact Fund (R5034-18) and Collaborative Research Fund (CRF)—Group Research Grant (C5026-18G) is greatly appreciated.

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Wireless Sensing and Applications	1
1.1.1	Applications in Healthcare and Assisted Living	3
1.1.2	Applications in Security and Surveillance	4
1.1.3	Human-Computer Interaction	5
1.1.4	Indoor Navigation	6
1.1.5	Industrial Automation	7
1.2	Wireless Sensing Framework	8
1.3	Organization of the Book	10
	References	10
<b>2</b>	<b>Wireless Signals and Signal Processing</b>	13
2.1	Preliminaries of Wireless Signals	13
2.2	Common Types of Wireless Signals	20
2.2.1	Acoustic Signal	20
2.2.2	RFID Signal	22
2.2.3	WiFi Signal	23
2.2.4	LoRa Signal	25
2.2.5	Radar Signal	26
2.2.6	Light Signal	28
2.3	Wireless Signal Processing Solutions	29
2.3.1	Signal Processing to Remove Signal Noises	29
2.3.2	Signal Processing to Release Signal Constraints	34
	References	43
<b>3</b>	<b>Wireless Sensing System Configurations</b>	45
3.1	Single-Transceiver vs. Multi-Transceiver Configurations	45
3.2	Device-Based vs. Device-Free Configurations	46
	References	47
<b>4</b>	<b>Wireless Sensing Methodologies</b>	49
4.1	Sensed Information from Wireless Signals	49

4.2	Model-Based Methodologies .....	51
4.2.1	Wireless Signal Propagation Models for Sensing .....	52
4.2.2	Pros and Cons of Model-Based Methodologies .....	60
4.3	Data-Driven Methodologies .....	60
4.3.1	Data Analytics and Machine Learning Algorithms for Wireless Sensing .....	61
4.3.2	Pros and Cons of Data-Driven Methodologies .....	65
	References .....	66
<b>5</b>	<b>Case Studies</b> .....	67
5.1	Human Respiration Monitoring .....	67
5.1.1	WiFi-Based Respiration Monitoring During Sleep .....	67
5.1.2	RFID-Based Respiration Monitoring in Dynamic Environments .....	79
5.1.3	RFID-Based Concurrent Exercise and Respiration Monitoring .....	94
5.1.4	UWB Radar-Based Multi-Person Respiration Monitoring ...	109
5.2	Human and Object Indoor Localization .....	120
5.2.1	Bluetooth-Based Human Indoor Localization .....	121
5.2.2	RFID-Based Object Indoor Localization .....	130
5.3	Liquid Sensing .....	141
5.3.1	Acoustic-Based Liquid Fraud Detection .....	142
	References .....	160
<b>6</b>	<b>Conclusion</b> .....	163
6.1	Research Summary .....	163
6.2	The Future .....	164
