Acknowledgements

The author would like to thank the Institute for Computer Science and Control (SZTAKI), Eötvös Loránd Research Network, Hungary and the Pázmány Péter Catholic University (PPCU) for funding his research work and providing excellent research infrastructure. The author gratefully acknowledges the continuous help of his closest colleagues at the Machine Perception Research Laboratory (MPLab) of SZTAKI, especially to Prof. Tamás Szirányi, laboratory head, and his former supervisor and mentor.

The author thanks the following colleagues for the contributions to various joint research papers on which this book is based: Tamás Szirányi, Ákos Utasi, Balázs Nagy, Attila Börcs, Maha Shadaydeh, Bence Gálai, and Zsolt Jankó from SZTAKI, Josiane Zerubia and Xavier Descombes from INRIA Sophia Antipolis, France, Marco Martorella from the University of Pisa, Italy, Zoltán Kató from the University of Szeged, and László Jakab and Olivér Krammer from the Budapest University of Technology and Economics.

The presented results rely on a large variety of particular test data. Special sensors, such as various high-speed cameras and real-time Lidar laser scanners, were available in the author's research laboratory, SZTAKI MPLab. Remotely sensed satellite images were provided by the Lechner Knowledge Center in Budapest and by INRIA, aerial and terrestrial Lidar point clouds by Airbus Defense and Space, Hungary, and by Budapest Közút Zrt, and radar images by the University of Pisa.

The research work introduced in this book was supported by various projects and grants: by the János Bolyai Research Fellowship of the Hungarian Academy of Sciences; by the National Research, Development and Innovation (NRDI) Office of Hungary within the frameworks of the National Laboratory for Autonomous Systems (NLAS), and the Artificial Intelligence National Laboratory (MILAB); by the NRDI Fund (OTKA) grants K-120233, KH-125681 and PD-101598; by the Hungarian R&D grants EFOP-3.6.2-16-2017-00013, EFOP-3.6.2-16-2017-00015 and TKP2021-NVA-01; by the DUSIREF project of the European Space Agency under the PECS-HU framework; by the APIS European Defence Agency project; and by the Michelberger Master Prize of the Hungarian Academy of Engineering.

Contents

1 Introduction 1

2 Fundamentals 9
2.1 Measurement Representation and Problem Formulations 9
2.2 Markovian Classification Models 11
2.2.1 Markov Random Fields, Gibbs Potentials, and Observation Processes 11
2.2.2 Bayesian Labeling Approach and the Potts Model 13
2.2.3 MRF-Based Image Segmentation 13
2.2.4 MRF Optimization 15
2.2.5 Mixed Markov Models 15
2.3 Object Population Extraction with Marked Point Processes 17
2.3.1 Definition of Marked Point Processes 17
2.3.2 MPP Energy Functions 18
2.3.3 MPP Optimization 20
2.4 Methodological Contributions of the Book 22

3 Bayesian Models for Dynamic Scene Analysis 25
3.1 Dynamic Scene Perception 25
3.2 Foreground Extraction in Video Sequences 27
3.2.1 Related Work in Video-Based Foreground Detection 27
3.2.2 MRF Model for Foreground Extraction 32
3.2.3 Probabilistic Model of the Background and Shadow Processes 33
3.2.4 Microstructural Features 38
3.2.5 Foreground Probabilities 41
3.2.6 Parameter Settings 43
3.2.7 MRF Optimization 49
3.2.8 Results 49
3.2.9 Summary and Applications of Foreground Segmentation 55

3.3 People Localization in Multi-camera Systems 55
3.3.1 A New Approach on Multi-view People Localization 57
3.3.2 Silhouette-Based Feature Extraction 58
3.3.3 3D Marked Point Process Model 59
3.3.4 Evaluation of Multi-camera People Localization 60
3.3.5 Applications and Alternative Ways of 3D Person Localization 62
3.4 Foreground Extraction in Lidar Point Cloud Sequences 63
3.4.1 Problem Formulation and Data Mapping 64
3.4.2 Background Model 65
3.4.3 DMRF Approach on Foreground Segmentation 65
3.4.4 Evaluation of DMRF-Based Foreground-Background Separation 68
3.4.5 Application of the DMFR Method for Person and Activity Recognition 70
3.5 Conclusions 77

4 Multi-layer Label Fusion Models 79
4.1 Markovian Fusion Models in Computer Vision 79
4.2 A Label Fusion Model for Object Motion Detection 82
4.2.1 2D Image Registration 85
4.2.2 Change Detection with 3D Approach 88
4.2.3 Feature Selection 88
4.2.4 Multi-layer Segmentation Model 90
4.2.5 L^3MRF Optimization 93
4.2.6 Experiments on Object Motion Detection 93
4.3 Long-Term Change Detection in Aerial Photos 101
4.3.1 Image Model and Feature Extraction 101
4.3.2 A Conditional Mixed Markov Image Segmentation Model 109
4.3.3 Experiments on Long-Term Change Detection 113
4.4 Parameter Settings in Multi-layer Segmentation Models 118
4.5 Conclusions 119

5 Multitemporal Data Analysis with Marked Point Processes 121
5.1 Introducing the Time Dimension in MPP Models 121
5.2 Object-Level Change Detection 122
5.2.1 Building Development Monitoring—Problem Definition 122
5.2.2 Feature Selection 124
5.2.3 Multitemporal MPP Configuration Model and Optimization 130
5.2.4 Experimental Study of the mMPP Model 132
5.3 A Point Process Model for Target Sequence Analysis 136
5.3.1 Application on Moving Target Analysis in ISAR Image Sequences 136

5.3.2 Problem Definition and Notations 137
5.3.3 Data Preprocessing in a Bottom-Up Approach 138
5.3.4 Multiframe Marked Point Process Model 142
5.3.5 Multiframe MPP Optimization 145
5.3.6 Experimental Results on Target Sequence Analysis 146
5.4 Parameter Settings in Dynamic MPP Models 152
5.5 Conclusions 154

6 Multi-level Object Population Analysis with an Embedded MPP Model 155
6.1 A Hierarchical MPP Approach 155
6.2 Problem Formulation and Notations 157
6.3 EMPP Energy Model 159
6.4 Multi-level MPP Optimization 161
6.5 Applications of the EMPP Model 162
6.5.1 Built-in Area Analysis in Aerial and Satellite Images 162
6.5.2 Traffic Monitoring-Based on Lidar Data 165
6.5.3 Automatic Optical Inspection of Printed Circuit Boards 169
6.6 Implementation Details 172
6.7 Quantitative Evaluation Framework 174
6.7.1 EMPP Benchmark Database 176
6.7.2 Quantitative Evaluation Methodology 177
6.8 Experimental Results 178
6.8.1 EMPP Versus an Ensemble of Single Layer MPPs 178
6.8.2 Application Level Comparison to Non-MPP-Based Techniques 181
6.8.3 Effects on Data Term Parameter Settings 182
6.8.4 Computational Time 183
6.8.5 Experiment Repeatability 185
6.9 Conclusion 186

7 Concluding Remarks 187
