**Study of a Switch Performance
and
Modelisation of an ATM broadband Network**

Mr. Omar A. Belaredj

Promoter : Pr. Dr. ir. E. Dirkx

Supervisor : ir. J. Lemeire

Dediplomeerde in de Aanvullende Studies van Telecommunicatie (Master in Engineering Telecommunication)

CONTENTS

Preface: The goal of this thesis.	1
Chapter 0 : Introduction.	2
Chapter 1 : ATM General Concept.	4
I- ATM Reference Model.	4
I - 1- ATM adaptation layer.	6
I - 2 - ATM layer.	8
I - 3 - ATM physical layer.	8
II- ATM Cells.	9
II - 1 - ATM Cell Basic Format.	9
II - 2 - ATM Cell-Header Format.	11
II - 3 - ATM Cell-Header Fields.	11
III - ATM Virtual Connections.	13
IV - ATM Connection Establishment.	13
Chapter 2 : ATM Switch Design.	15
I - ATM Switch.	15
I - 1 - Cell Switch Fabric.	15
I - 2 - Connection Admission Control.	17
II - Scalability of a Switch.	17
III - ATM Switch Architecture.	18
IV - ATM Switch Element Architecture.	20
V- Class of Sources.	21
V - 1 - Constant Bit Rate.	21
V - 2 - Variable Bit rate.	21
V - 3 - Available Bit rate.	22
V - 4 - Unspecified Bit Rate.	24
VI - ATM Switch Topology.	24

Chapter 3 : ATM Switch Performances.	25
I - Design Goal.	25
II - Experimental Method.	26
II - 1 - Simulation.	26
II - 2 - Traffic shaping.	27
II - 3 - Experimentation.	27
III- Throughput / Cell loss.	27
IV- Latency / Jitter.	31
V- Average buffer length / Congestion.	34
VI- Discussion and Suggestions.	36
VII- Case: Voice transmission (64 Kbps)	38
Chapter 4 : Broadband Multiservices Networks.	40
I - Introduction.	40
II - Broadband Services.	40
II - 1 - Video services.	40
II - 2 - TV Distribution.	41
II - 3 - Videophony and Videoconference.	41
II - 4 - Video retrieval.	41
II - 5 - Audio service.	42
II - 6 - Data.	42
III - Building an ATM Wide Area Network Model.	42
III - 1 - ATM Switch connections model.	42
III - 2 - ATM Wide Area Network Model.	44
Chapter 5 : Conclusion.	46
Appendix A.	
Appendix B.	
Appendix C.	
References.
