DEPARTEMENT DE MATHEMATIQUE

*Existence and multiplicity
results for semilinear
hyperbolic and elliptic equations*

ABDOU KOUIDER BEN-NAOUM

Dissertation présentée en vue
de l'obtention du grade de
Docteur en Sciences

Promoteur : JEAN MAWHIN

Louvain-la-Neuve, Mars 1994

Contents

Introduction	5
I Hyperbolic case: nonlinear wave equations	11
1 The periodic-Dirichlet problem for some semilinear wave equations	13
1.1 Introduction	13
1.2 Existence and uniqueness results for Lipschitzian perturbations of self-adjoint operators in a Hilbert space	14
1.3 Existence and uniqueness results for strongly monotone perturbations of self-adjoint operators in a Hilbert space	17
1.4 The periodic-Dirichlet problem for semilinear wave equations for some irrational ratios between the period and interval length	21
1.5 Appendix A: A problem in number theory	24
1.6 Appendix B: Semilinear equations of gradient type in Hilbert spaces	28
2 Periodic solutions of some semilinear wave equations on balls	31
2.1 Introduction	31
2.2 The linear eigenvalue problem	34
2.3 Preliminary lemmas for the linear problem	39
2.4 The nonlinear problem in the case of even dimension	46
2.5 The nonlinear problem in the case of odd dimension	52
2.6 Appendix: A degree theory for some non linear perturbations of a Fredholm operators	60
2.6.1 Fredholm and L -compact mappings	61
2.6.2 The coincidence degree	62

3	Simple and multiple periodic solutions of the spherical wave equation	67
3.1	Introduction	67
3.2	The spherical wave operator	68
3.3	Existence result	70
3.4	Multiplicity result	71
3.4.1	The abstract result of Costa-Willem	71
3.4.2	Application to even dimensional case	73
3.4.3	Application to odd dimensional case	74
4	Nontrivial solutions for some semilinear problems and applications to wave equations on ball and on sphere	79
4.1	Introduction	79
4.2	Preliminaries	80
4.3	Some general estimates	84
4.4	Existence of solutions of the equation $Au = Nu$	88
4.5	Applications to wave equations on balls and on spheres	89
4.5.1	Wave equation on ball	89
4.5.2	Spherical wave equation	94
II	Elliptic equations	97
5	Existence and multiplicity results for homogeneous second order differential equations	99
5.1	Introduction	99
5.2	Abstract Results	100
5.2.1	Existence result	100
5.2.2	Multiplicity result	102
5.3	Applications	106
5.3.1	The periodic case	106
5.3.2	The Neumann problem	109
6	Extrema problems with critical Sobolev exponents on unbounded domains	111
6.1	Introduction	111
6.2	The spaces $W^{1,p}$ and $\mathcal{D}^{1,p}$	112
6.3	Compactness of a functional	115
6.4	The minimization problem	117
6.5	The maximization problem	122
	Bibliography	125
