THESE

Présentée pour l'obtention du grade de DOCTORAT

en INFORMATIQUE

Spécialité : Programmation et Systèmes

Par

Mr Mohamed GUERROUMI

Thème

**Data Management in Wireless Sensor
Networks**

Soutenue le . . . /2014, devant le jury composé de:

Mr.	A. BELKHIR	Professeur, USTHB	Président
Mr.	N. BADACHE	Professeur, CERIST/USTHB	Directeur de thèse
Mr.	H. HAFFAF	Professeur, Univ Oran	Examinateur
Mr.	M. KOUDIL	Professeur, ESI	Examinateur
Mme.	L. BOUALOUCHE	MCA, Univ Béjaia	Examinatrice
Mr.	M. BENCHAIBA	MCA, USTHB	Examinateur

Abstract

A wireless sensor network is typically composed of many tiny computers that feature a low frequency processor, some flash memory for storage, a radio for short-range wireless communication and limited energy source. Applications of wireless sensor networks have emerged in many domains ranging from environmental monitoring to structural monitoring as well as industry manufacturing. In all these applications, the primary task of a wireless sensor networks is to collect useful information by monitoring phenomena in the surrounding environment. Typically, in a wireless sensor network, sensor nodes generate data about a phenomenon and disseminate streams of data to a special device, namely a data sink, for analysis and processing.

Data management in wireless sensor networks has been an area of significant research in recent years. Many existing sensor data management systems view sensor data as a continuous stream that is sensed, filtered, processed, aggregated and disseminated from sensor node to users.

This thesis focuses on the efficient data extraction and dissemination in wireless sensor networks with energy awareness to extend the lifetime of the network. Energy is a critical factor as sensor nodes once deployed cannot be recharged. These sensor nodes majorly depend on batteries for energy, which get depleted at a faster rate because of the computation and communication operations they have to perform. Communication protocols can be designed to make efficient utilization of energy resources of a sensor node. As first part of our research, we start with studying and analyzing the main sources of energy consumption in wireless sensor networks. We present an overview of some well known existing solutions. We propose a set of algorithms to organize the Medium Access Control and minimize energy consumption. In this first part, we propose two MAC protocols both for asynchronous and synchronous communication mode. We evaluate the parameters of performance and we investigate the problems of energy consumption with extensive simulations.

We study in the second part, the problem of data dissemination in wireless sensor networks. We propose a mechanism to disseminate the sensed data form sensor node to the sink with minimum resource requirements. We extend this mechanism to support sink mobility, as in large sensor network, the communication between the sensors and the stationary sink can lead to high energy consumption, and consequently reduce the lifetime of the network. In our sink mobility scheme, the mobile sink selects its next destination based on the data dissemination frequent. We evaluate with extensive simulations and we compare the communication and the traffic cost of the proposed data dissemination with other approaches.

Keywords: Wireless sensor networks, Energy consumption, MAC layer, Data dissemination, Mobile sink.

Acknowledgements

First and foremost, I would like to express my gratitude to my supervisor, Professor Nadjib BADACHE, who gave me the opportunity to do this PhD research. He gave me the freedom to try out new ideas and gave me continuous support during the research.

I feel very lucky to have daily support and guidance from Professor Samira MOUSSAOUI. She is such a friendly and patient person. I have really learned a lot from her; how to present an idea properly and to construct precise statements.

I particularly appreciate Doctor Al-Sakib Khan Pathan from IIUM for his help and guidance. He provided refreshing insight, critical questions and valuable comments on my papers. I am grateful for his steady encouragement and infinite attention to details that ensured the quality of my work.

I would like to thank Professor Abdelkader BELKHIR, Professor Hafid HAFFAF, Professor Mouloud KOUDIL, Doctor Mahfoud BENCHAIBA and Doctor Louiza BOUALLOUCHE for agreeing to serve on my thesis committee.

I am also grateful to Professor Abdelmadjid BOUABDALLAH from UTC France and Doctor Mahfoud BENCHAIBA for giving their expertise and approved my PHD work.

Many thanks to my parents for their love, committed support, and prayers in all that I have done till now are the keys of all my achievements. Many thanks to my brothers and my sisters for their always encouragement. Many thanks to my wife for her patient and fully support.

Finally, my most heartfelt thanks...
