# General Chairman's Message

It is my honor to officially welcome you to ICC '93, in Geneva, Switzerland. The conference theme "Communications – Technology that Unites Nations" corresponds very well with the activities of many international organizations located in Geneva, including several UN agencies, the International Red Cross, the International Telecommunication Union (ITU), and the European Nuclear Research Center (CERN). The IEEE Switzerland Section is delighted to host this meeting that is being held for only the second time in Europe after ICC '84 in Amsterdam.

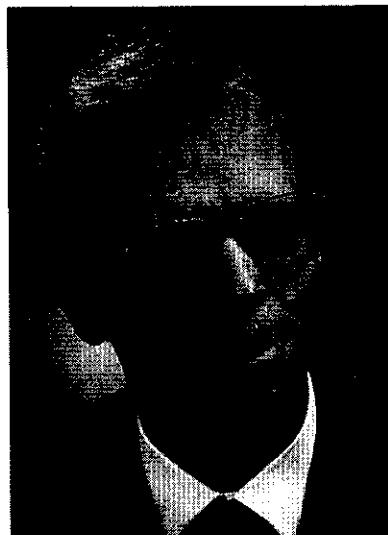

ICC '93 offers a superb opportunity for strengthening existing bonds between European communication engineers and their colleagues from abroad. It also presents a unique chance to establish new contacts, especially for participants from eastern European countries, who will profit from the short distance to Geneva. The ICC '93 exhibition areas, in the immediate vicinity of the session rooms in both the Geneva International Conference Center and the neighboring ITU building, provide a convenient location for these person-to-person exchanges of information.

The ICC '93 Technical Program Committee has assembled an outstanding selection from the more than 800 contributions that it received from leading communication researchers and designers. In the tradition of the ICC, the 54 technical sessions, which will take place from Monday, May 24, through Wednesday, May 26, will cover the whole spectrum of modern communications. A series of 11 tutorials and three workshops on subjects of great current interest will follow on Thursday, May 27, an arrangement that avoids any conflicts with the technical sessions.

An attractive social program has also been planned for ICC '93. Enjoy the Welcome Reception on Sunday evening, May 23, which is open to all participants and their families and is the perfect occasion for renewing old friendships and making new ones. Guided tours to either the International Red Cross Organization or the

United Nations European Center will be available on Monday afternoon. In no case will you want to miss the Monday evening boat cruise on the lovely Lake of Geneva; a delicious "Buffet Campagnard" will be served on board. Excursions to the famous Chillon Castle near Montreux on the edge of the Lake of Geneva and to Zermatt with its spectacular mountain scenery (including the Matterhorn of the ICC '93 logo) will be offered on Tuesday and Wednesday, respectively. The traditional Awards Luncheon on Monday and Conference Banquet on Tuesday evening round out the social program.

Experience the appeal of Geneva, the international city in the heart of Europe. Since May is a beautiful season here in Switzerland, I encourage you to spend some days with your family, either before or after ICC '93, exploring the beauties of the Swiss Alps and the cultural highlights of our country. On behalf of the ICC '93 Executive Committee, I cordially welcome you to ICC '93 in Geneva.

Prof. Dr. Peter E. Leuthold

# Technical Program Chairman's Message

There are good reasons to believe that the technical program for ICC '93 will set a new standard for the ever excellent GLOBECOM/ICC series. The primary reason for this is the wealth of submissions from which the Technical Program Committee (TPC) had to choose. We received 820 submissions of full-length papers. Another reason is that the TPC treated all papers, whether solicited or submitted in response to the open call, on the same basis. The aim was to select the best papers for presentation and to group them by their subject matter into appropriate sessions.

One innovation for ICC '93 was the creation of a Review Board as a part of the TPC. This Review Board consisted of 27 telecommunications experts, all chosen from Europe to facilitate holding of a Review Board meeting in Zurich on Nov. 30, 1992, where a preliminary selection of papers and session assignments was made. This advance work greatly assisted the full TPC at its meeting in Orlando on Dec. 8, 1992, in making the final selection of papers and session assignments. To establish uniformity in the standards for judging the papers, each of the submitted papers was assigned to a Review Board member for evaluation. The Review Board members responded conscientiously to this daunting task. The representatives on the TPC of the sixteen Technical Committees of the IEEE Communications Society did a superb job in soliciting at least two further reviews for each paper assigned to their area of specialization, as also did the session organizers to whom the responsibility for obtaining these reviews was often delegated.

Prof. Dr. James L. Massey

Another innovation was the use of an on-line electronic data base, established and maintained by the able TPC secretary, Thomas Mittelholzer, that allowed TPC members on three continents instantly to check the status of papers under their care or to catch papers inappropriately assigned to another Technical Committee. A final innovation in the ICC '93 technical program was the assignment of all Tutorials and Workshops to a separate day, following the three days of regular technical sessions, to minimize conflicts for ICC '93 attendees.

It seems to me that all of the above augurs well for the success of the ICC '93 technical program, but you, the participant, will be the final judge of that. What I can say for sure is that the credit for any such success will be due to an able and very hard-working Technical Program Committee.

# Tutorials

**Thursday, May 27, 1993**  
Morning or/and afternoon

**TUTORIAL 1 Room ITU B1**

**9 am - 12:30 pm**

**ITU Standards: Processes for Standards Approvals**

**Dr. T. Irmer, ITU Telecommunication Standardization Bureau**

This timely tutorial will introduce the participant to the process by which the International Telecommunication Union (ITU) sets telecommunication standards to which both suppliers and users of equipment agree to adhere. It will provide both the novice and the experienced engineer with vital insights into the standard setting process.

**TUTORIAL 2 Room ITU B2**

**9 am - 5:30 pm**

**ATM Technology: Compatibility for Local and Wide Area Metropolitan Networks**

**Dr. J.F. Mollenauer, Technical Strategy Associates**

This tutorial will cover applications, standards, and technology for Asynchronous Transfer Mode (ATM) networks. The application of ATM to wide-area networks in the Broadband Integrated Services Digital Network (B-ISDN) will also be discussed. Implementation issues will be addressed, both from the technical and from the marketing viewpoint.

**TUTORIAL 3 Room ITU C1**

**9 am - 12:30 pm**

**Modeling and Simulation of Wireless Communications**

**Prof. K. Shanmugan, Univ. Kansas  
Dr. P. Balaban, AT&T Bell Labs  
Prof. T.S. Rappaport, Va. Polytech**

Radio is emerging as a prime media for inhouse communications as well as for mobile communications. This tutorial will provide a systematic treatment of the modeling and simulation of such wireless communication systems.

**TUTORIAL 4 Room ITU C1**

**2 pm - 5:30 pm**

**Radiowave Propagation Measurements & Modeling for Personal Communications**

**Dr. D. Devasirvatham, Bellcore  
Prof. T.S. Rappaport, Va. Polytech**

Radiowave propagation profoundly affects the architecture and performance of personal and mobile radio communication systems. This tutorial will cover the measurement and modeling of time dispersion, short-term variability, path loss, spatial inhomogeneity, angle of arrival, and frequency dependence.

**TUTORIAL 5 Room CICG III**

**9 am - 5:30 pm**

**Global System for Mobile Communications (GSM)**

**Prof. A.K. Kakaes, George Washington Univ.**

The pan-European system for digital cellular communications, GSM, is currently being put into operation, capping a decade-long development of the GSM standard. This tutorial will explain the fundamental aspects of GSM in a manner to make the "big picture" clear and enable the participant later to read and understand the necessary details.

**TUTORIAL 6 Room ITU A**

**9 am - 12:30 pm**

**Telecommunications Management Network (TMN) and Subnetwork Management**

**Dr. V. Sahin, NEC America  
Dr. S. Aidarous, Bell North. Res.**

The Telecommunications Management Network (TMN) provides a framework for interconnecting various components in a telecommunications environment via a common architecture and standardized protocols and interfaces. This tutorial will explain interworking strategies for TMN networks that allow network providers to deploy network elements and operations systems in a multi-vendor environment.

**TUTORIAL 7 Room ITU A**
**2 pm - 5:30 pm**
**Intelligent and Integrated Management of Messaging Networks**
**Dr. R. Ananthanpillai, AT&T Bell Labs**

This tutorial will address management issues for a globally distributed electronic messaging network with emphasis on management of the processing nodes. The integrated and intelligent managing of the message application and its processing node within a complex system of network elements will be addressed.

**TUTORIAL 8 Room CICG IV**
**9 am - 12:30 pm**
**Fiber to the Home**
**Dr. P.W. Shumate, Jr., Bellcore**

This tutorial examines the key issues (including architectures, costs, powering, video alternatives, and evolution strategies) involved in residential "fiber-in-the-loop" as part of the development of the future fiber loop infrastructure for B-ISDN. Because of falling costs attributable to new and unconventional architectures, fiber has become competitive with copper for narrowband telephony and/or cable television.

**TUTORIAL 9 Room CICG IV**
**2 pm - 5:30 pm**
**High-Speed Data Communications over the Local Cable Network**
**Dr. N.A. Zervos, AT&T Bell Labs**

Bandwidth-efficient digital signaling and submicron VLSI technology enable very high speed (1.5 Mb/s) data transmission over local subscriber loops. This tutorial will cover the transmission, reception, and coding techniques that are currently being introduced worldwide in the HDSL and asymmetric DSL (ADSL) systems for local-loop data communications.

**TUTORIAL 10 Room ITU C2**
**9 am - 12:30 pm**
**Adaptive Antennas and Equalization in Wireless Systems**
**Dr. J.H. Winters, AT&T Bell Labs  
Dr. J. Salz, AT&T Bell Labs**

This tutorial will explain how antenna diversity and equalization can be used to overcome multipath fading, dispersion due to frequency-selective fading, and inter-user interference. Practical implementation of these techniques in systems such as IS-54, GSM and PCS will be stressed.

**TUTORIAL 11 Room ITU C2**
**2 pm - 5:30 pm**
**Intelligent Networks**
**Prof. B. Jabbari, George Mason Univ.**

This tutorial will examine the key issues in Intelligent Networks (INs) and explain the rationale behind various IN architectures. IN functional components will be reviewed in the context of different releases of the AIN and CCITT CS together with hardware and software realizations. Implementation plans for a number of telecommunication IN networks throughout the world will be presented.

# Workshops

**Thursday, May 27, 1993**

All day or afternoon

**WORKSHOP 1 Room ITU B1**

**2 pm - 5:30 pm**

## Error Performance Specifications for Digital Transmission Systems

CCITT Draft Recommendation G.82x, "Error performance parameters and objectives for international, constant bit rate digital paths at or above the primary rate" (1544 or 2048 kbit/s) is expected to be adopted in June 1993 and will apply to all line and radio transmission media. G82x supplements existing CCITT Recommendation G.821 that applies to the basic rate (64 kbit/s) but introduces a new set of performance criteria and more stringent objectives.

This workshop will provide a forum for presentation of this important new standard and for discussion of the various application issues that arise in connection with G.82x.

### Organizer:

Dr. Ferdo Ivanek, Communications Research

### Speakers:

F. Ivanek  
F. Coening, Wandel & Goltermann  
M. Bonnifait, France Telecom  
Dr. H.-J. Thaler, Siemens  
Dr. M. Stojkovic, Intelsat

**WORKSHOP 2 Room CICG I**

**9 am - 5:30 pm**

## All-Optical Networks: Challenges

Recent advances in such optical technologies as wavelength-division multiplexing, optical frequency-division multiplexing, and optical switches, have made all-optical, very high-speed networks attractive and feasible.

This workshop will review progress in Europe, the USA and Japan, and will describe the challenges that lie ahead in the development and implementation of all-optical networks.

### Organizers:

Dr. P. Chidgey, British Telecom Labs.  
Dr. C. Lin, Bellcore  
Prof. M. O'Mahony, Univ. Essex

J. McEachern, BNR  
T. Takasaki, Hitachi  
M. Sotom, Alcatel  
L. Thylen, Royal Inst. Tech., Stockholm  
M. Takahara, Yamanashi Univ.

**WORKSHOP 3 Room CICG II**

**9 am - 5:30 pm**

## Advances in Satellite and Space Communication Technologies

This workshop will focus on the issues, designs, interfaces and techniques for advanced space and satellite (fixed/mobile/personal) communication systems.

Experts will describe system architectures, transmission techniques, services, field-trial experiences, interface and global interoperability standards.

### Organizers:

Dr. S.N. Verma, GE Aerospace  
Dr. C.E. Mahle, COMSAT Labs.  
Prof. M. Bousquet, ENSAE Toulouse
