PREFACE

The AAECC conferences began in Toulouse in 1983. The proceedings of AAECC-1 were published as a special issue of Discrete Mathematics. The proceedings of AAECC-2 are also published by Springer-Verlag as a volume in the Lecture Notes in Computer Science series. This third conference was organized by the "Laboratoire d'Informatique Fondamentale et d'Intelligence Artificielle" (LIFIA) in Grenoble on July 15-19, 1985. It was held in the building of the "Ecole Nationale Supérieure d'Ingénieurs en Informatique et Mathématiques Appliquées" of the National Polytechnic Institute of Grenoble.

The main motivation for this series of conferences was to gather researchers in error-correcting codes, applied algebra and algebraic algorithms. The latter topic has been extended to computer algebra in general. Applied algebra must be understood as applied to computer science. After three conferences, it appears that they fill a communication gap. It is thus natural that the AAECC conferences are going to be held annually in different countries. For this reason, a permanent organizing committee has been set up. It consists of: Thomas Beth, Jacques Calmet, Anthony C. Hearn, Joos Heintz, Hideki Imai, Heinz Lüneburg, H.F. Mattson Jr. and Alain Poli. The next conferences will be held in Karlsruhe (1986), Barcelona (1987), Pisa or Roma (1988), Toulouse (1989) and Yokohama (1990).

I am very grateful to the following institutions and organizations for their generous funding of the conference:

- . DRET (Direction des Recherches, Etudes et Techniques du Ministère de la Défense)
- . CNRS (Centre National de la Recherche Scientifique)
- . SMF (Société Mathématique de France)
- . INPG (Institut National Polytechnique de Grenoble)
- . Mairie de Grenoble
- . Conseil Général de l'Isère.

No conference is successful without many people contributing their time and efforts in its preparation. The referees did an excellent job in reading and evaluating many papers in a very short amount of time, both before and after the meeting was held. The session chairpersons were very efficient in keeping the conference on tracks. A special thanks is deserved by Alain Poli who made available to me his experience of organizing the previous AAECC conferences.

The local organization ran smoothly because of the help of Ph. Chatelin. Isabelle Michel has been a very efficient and pleasant conference secretary. G. Veillon, the ENSIMAG director, provided us with all the help we required. I extend my warmest thanks to all of them.

Jacques Calmet
May 1986

ORGANIZING COMMITTEE

Th. BETH, University of London, England and University of Karlsruhe, FRG
J. CALMET, LIFIA, Grenoble, France (Conference Chairman)
A.C. HEARN, The Rand Corporation, Santa Monica, USA
H. LÜNEBURG, University of Kaiserslautern, FRG
A. POLI, University Paul Sabatier, Toulouse, France

SCIENTIFIC COMMITTEE

B. BUCHBERGER, University J. Kepler, Linz, Austria
P. CAMION, INRIA, Rocquencourt, France
B.F. CAVINESS, University of Delaware, Newark, USA
G.E. COLLINS, University of Wisconsin at Madison, USA
B. COURTEAU, Sherbrooke University, Canada
J.H. DAVENPORT, University of Bath, England
E. ENGELER, ETH, Zürich, Switzerland
J. HEINTZ, Univ. Frankfurt and IAM, Buenos Aires, Argentina
L. HUGUET, Autonomous University of Barcelona, Spain
H. IMAI, Yokohama National University, Japan
D. LAZARD, University of Paris VI, France
R. LOOS, University of Karlsruhe, FRG
H.F. MATTSON Jr., Syracuse University, USA
A. MIOLA, IASI-CNR, Roma, Italy
Ph. PIRET, Philips Research Lab., Brussels, Belgium
C.C. SIMS, Rutgers University, New Brunswick, USA
H. ZASSENHAUS, Ohio State University, Columbus, USA

LOCAL ORGANIZATION: J. CALMET and Ph. CHATELIN, LIFIA, Grenoble, France

List of Referees

J.A. Abbott, Th. Beth, B. Buchberger, R. Caferra, J. Calmet, P. Camion, B.F. Caviness, G. Cohen, G.E. Collins, B. Courteau, J.H. Davenport, K. Dittenberger, E. Engeler, R. Gebauer, K.O. Geddes, A.C. Hearn, J. Heintz, L. Huguet, H. Imai, D. Lazard, A. Leitsch, R. Loos, H. Lüneburg, H.F. Mattson Jr., A. Miola, F. Mora, J. Padget, Ph. Piret, A. Poli, C.C. Sims, J. Smit, F. Winkler, H. Zassenhaus.

Session chairpersons

M. Bergman, B. Buchberger, P. Camion, B. Courteau, K.O. Geddes, C. Goutelard, A.C. Hearn, J. Heintz, L. Huguet, H. Imai, H. Lüneburg, T. Matsumoto, H.F. Mattson Jr., A. Miola, F. Mora, M.F. Newman, A. Poli, V. Weispfenning, J. Wolfmann.

TABLE OF CONTENTS

Introduction	1
<i>On the Arithmetics of Galois fields and The Like</i>	2
<i>(Algebraic Questions Arising in the Design of Secure Communication Systems)</i>	
Th. Beth (University of Karlsruhe) (Invited)	
<i>On Strongly Tactical Codes</i>	17
M. Gundlach (University of Mainz)	
<i>Integer Programming Applied to Eigenvector Computation in a Class of Markov Processes</i>	27
A. Oisel (CII-Honeywell Bull Co.)	
<i>A Minimum System of Generators for Extended Cyclic Codes which are Invariant under the Affine Group</i>	34
P. Charpin (University of Paris VI)	
<i>Some Algebraic Tools for Error-Correcting Codes</i>	43
A. Poli (University P. Sabatier of Toulouse) (Invited)	
<i>On Computing the Performance Probabilities of Reed-Solomon Codes</i>	61
S. Jennings (Racal Research Ltd. Reading)	
<i>Numerical Experiments Related to the Covering Radius of Some First Order Reed-Muller Codes</i>	69
J. Constantin, B. Courteau (University of Sherbrooke)	
J. Wolfmann (University of Toulon)	
<i>Several Aspects of Problems Encountered in Coding Applications</i>	76
C. Goutelard (LETTI, Paris) (Invited)	
<i>Software Simulation of Data Transmission Using Error-Correcting Codes Through an AWGN Channel</i>	95
M.C. Gennaro and D. Randriananja (University P. Sabatier of Toulouse)	
<i>Algebraic Methods for Constructing Asymmetric Cryptosystems</i>	108
H. Imai (Yokohama National University) (Invited)	
T. Matsumoto (University of Tokyo)	
<i>Covering Radii of Even Subcodes of t-dense Codes</i>	120
H. Janwa and H.F. Mattson, Jr. (Syracuse University, NY) (Invited)	
<i>Orthogonal Transform Encoding of Cyclic Codes</i>	131
W. Fumy (University of Erlangen-Nuremberg)	
<i>On S-Sum-Sets and Projective Codes</i>	135
M. Grieria, J. Rifà and L. Huguet (Autonomous University Barcelona)	
<i>Pseudo-Triple-Sum-Sets and Association Schemes</i>	143
L. Huguet, J. Rifà and M. Grieria (Autonomous University Barcelona)	
<i>A Decoding Algorithm for Linear Codes</i>	150
M. Bossert and F. Hergert (TH Darmstadt)	
<i>The Finite Fourier-Transform and Theta Functions</i>	156
H. Opolka (University of Göttingen)	

<i>Recent Results on Coding and Algebraic Geometry</i>	167
J. Wolfmann (University of Toulon) (Invited)	
<i>Some Properties of Elliptic Codes Over a Field of Characteristic 2</i>	185
Y. Driencourt (University of Paris 7)	
<i>Self-Dual Codes $2n$ Circulant Over F_q ($q = 2^r$)</i>	194
A. Poli and C. Rigoni (University P. Sabatier of Toulouse)	
<i>Automorphisms and Isometries of Some Modular Algebras</i>	202
M. Ventou (University P. Sabatier of Toulouse)	
<i>A Lower Bound for the Bilinear Complexity of Some Semisimple Lie Algebras</i>	211
H.F. de Groote (J.W. Goethe University of Frankfurt)	
J. Heintz (I A M, Buenos Aires) (Invited)	
<i>On Computational Complexity of Some Algebraic Curves Over Finite Fields</i>	223
D. Le Brigand (University of Paris VI)	
<i>Some Group Presentations and Enforcing the Associative Law</i>	228
M.F. Newman (Australian National University) (Invited)	
<i>Fast Computation of Linear Finite-Dimensional Operators over Arbitrary Rings</i>	238
E.G. Belaga (University L. Pasteur Strasbourg)	
<i>Quantifier Elimination for Real Closed Fields</i>	247
W. Böge (University of Heidelberg) (Invited)	
<i>Efficient Decision Algorithms for Locally Finite Theories</i>	262
V. Weispfenning (University of Heidelberg)	
<i>The Algorithmic Structure of $sl(2, k)$</i>	274
R. Mirwald (J.W. Goethe University of Frankfurt)	
<i>Optimal Algorithms for Finite Dimensional Simply Generated Algebras</i>	288
A. Fellmann (J.W. Goethe University of Frankfurt)	
<i>On a Little but Useful Algorithm</i>	296
H. Lüneburg (University of Kaiserslautern) (Invited)	
<i>Computation of Independent Units in Number Fields by Dirichlet's Method</i>	302

Introduction

This volume includes 42 of the talks presented at the AAECC-3 conference and an abstract of an invited lecture. The topics of the conference were: error-correcting codes, applied algebra, algebraic algorithms and symbolic computation. In addition to the papers selected for this volume, informal talks and demonstrations were also part of the conference. These proceedings do not reflect the 19 sessions which took place since many communications are not part of them. They are organized according to the three main topics covered by AAECC-3 in the following ordering: error-correcting codes, applied algebra and computer algebra. What is still respected is the order of presentation of the talks within each of these topics.

It was intended by the organizers to cover not only the algebraic parts of error-correcting coding theory and computer algebra, but also to present the aspects of these fields concerned by applications and their link with and impact on technology. We do hope that these proceedings illustrate this aim.

Another goal of this series of conferences is to stimulate communication and cooperation between scientists working in domains which have many common features but using different approaches. It looks like this goal has also been achieved. We expect to see an illustration of this statement in the proceedings of the forthcoming conferences.

A last introductory remark is that this volume may be seen as an illustration of the present trend integrating computer science and communication theory. In this present example, the computer algebra field of computer science and security of communications are investigated. Applied algebra is by no mean foreign to this integration: it is the common language.
