## PREFACE

This bibliography contains 813 annotated references from the monograph, periodical and report literature on automation in libraries and information systems covering the period January 1972 to December 1975. It is intended as a continuation of *An Annotated Bibliography of Library Automation 1968-1972* compiled by Lynne Tinker, London, Aslib, 1973. The scope has been widened and, although the period of time overlaps, no article appears in both bibliographies. The coverage is selective and in the English language only. Most of the material listed is contained in the Aslib library and available for loan.
