3 THE Z-TRANSFORM

78

- 3.1 Definition of the z-Transform 78
- 3.2 Evaluation of z-Transforms 81
- 3.3 Mapping Between the s-Plane and the z-Plane 84
- 3.4 The Inverse z-Transform 88
- 3.5 Theorems of the z-Transform 95
- 3.6 Limitations of the z-Transform Method 103
- 3.7 The Pulse Transfer Function
- 3.8 Pulse Transfer Function of the Zero-Order Hold and the
Relation Between $G(s)$ and $G(z)$ 108
- 3.9 Responses Between Sampling Instants 111
- 3.10 Signal-Flow-Graph Method Applied to Digital Systems 121
- 3.11 Multirate Digital Systems 137

4 THE STATE VARIABLE TECHNIQUE

163

- 4.1 Introduction 163
- 4.2 State Equations and State Transition Equations of
Continuous-Data Systems 164
- 4.3 State Equations of Digital Systems with Sample-and-Hold 170
- 4.4 State Equations of Digital Systems with All-Digital Elements 172
- 4.5 State Transition Equations of Digital Systems 172
- 4.6 State Transition Equation of Digital Time-Invariant Systems 176
- 4.7 Digital Simulation and Approximation 177
- 4.8 Solution of the Time-Invariant Discrete State Equation by
the z-Transformation 178
- 4.9 Relation Between State Equation and Transfer Function 181
- 4.10 Characteristic Equation, Eigenvalues and Eigenvectors 185
- 4.11 Diagonalization of the A Matrix 192
- 4.12 Jordan Canonical Form 195
- 4.13 Methods of Computing the State Transition Matrix 198
- 4.14 Digital Adjoint Systems 206
- 4.15 Relationship Between State Equations and High-Order
Difference Equations 208
- 4.16 Transformation to Phase-Variable Canonical Form 210
- 4.17 The State Diagram 218
- 4.18 Decomposition of Digital Systems 225

- 4.19 State Diagrams of Sampled-Data Control Systems 231
- 4.20 Response of Sampled-Data Systems Between Sampling
Instants Using the State Approach 237
- 4.21 Analysis of Discrete-Time Systems with Multirate,
Skip-Rate, and Nonsynchronous Samplings 239
- 4.22 State-Plane Analysis 244

5 STABILITY OF DIGITAL CONTROL SYSTEMS 267

- 5.1 Introduction 267
- 5.2 Definitions of Stability 270
- 5.3 Stability Tests of Digital Systems 277
- 5.4 The Second Method of Liapunov 287

6 DIGITAL SIMULATION AND DIGITAL REDESIGN 303

- 6.1 Introduction 303
- 6.2 Digital Simulation - Digital Model with Sample-and-Hold 303
- 6.3 Digital Simulation - Numerical Integration 308
- 6.4 Digital Simulation by the z-Forms 315
- 6.5 Digital Redesign 321

7 TIME-DOMAIN ANALYSIS 344

- 7.1 Introduction 344
- 7.2 Comparison of Time Responses of Continuous-Data and
Digital Control Systems 346
- 7.3 Correlation Between Time Response and Root Locations
in the s-Plane and the z-Plane 353
- 7.4 Effect of the Pole-Zero Configurations in the z-Plane Upon
the Maximum Overshoot and Peak Time of Transient
Response of Sampled-Data Systems 356
- 7.5 Root Loci for Digital Control Systems 366
- 7.6 Steady-State Error Analysis of Digital Control Systems 373

x Contents

14.7 Time Delays in Microprocessor-Based Control Systems 699
14.8 Effects of Quantization · Least-Upper Bound on
Quantization Error 705

APPENDIX A 722
