

Proceedings of the Annual International Conference of the IEEE Engineering in Medicine and Biology Society

Volume 14

PARIS, FRANCE

October 29 - November 1, 1992

Edited by

Jean Pierre Morucci

Robert Plonsey

Jean Louis Coatrieux

Swamy Laxminarayan

PART 2

- Track 1: Artificial Heart
- Track 18: Cardiovascular Systems models and Techniques
- Track 26: ECG and Signal Processing
- Track 28: Electrocardiology Simulation and Modeling
- Track 32: Fibrillation and Defibrillation
- Track 37: Hemodynamics and Biotheology
- Track 38: The Lungs and the Pulmonary Circulation
- Track 40: Instrumentation in Cardiology

TABLE OF CONTENTS

PART 2

Preface	iii
Acknowledgements	iv
Overview by Parts	v

Track 1

Session 1 : Artificial Heart — 1

An automatic monitoring and estimation tool for the cardiovascular dynamics under ventricular assistance — <i>Makoto Yoshizawa, Ken-ichi Kuramoto, Hiroshi Takeda, Makoto Miura, Tomoyuki Yambe, and Shin-ichi Nitta</i>	364
Control of rotary pulsatile cardiac assist pump driven by an electric motor — <i>J. Trinkl, P. Havlik, N. Mitsui, J. L. Demunck, T. Mesana, J. L. Tourres, B. Candelon, and J. R. Montiès</i>	367
Rhythmical fluctuations of the arterial blood pressure in animal with total artificial heart — <i>Tomoyuki Yambe, Shinichi Nitta, Yoshiaki Katahira, Taroh Sonobe, Shigeru Naganuma, Yoshito Kakinuma, Hiroshi Akiho, Motonao Tanaka, Makoto Miura, Naoshi Sato, Hiroshi Mohri, Makoto Yoshizawa, Satoshi Koide, and Hiroshi Takeda</i>	369
Diagnostic support system design for artificial heart control — <i>Tadashi Kitamura</i>	371
Intra-aortic balloon versus extra-aortic counterpulsation in severe cardiac failure differences in aortic input impedance and left ventricular power generation — <i>John A. Zelano, Wilson Ko, W. Douglas Lazenby, O. Wayne Isom, and Karl H. Krieger</i>	373
Design considerations for reliability of the Novacor LVAS wearable control system — <i>James Lee, Matt Ryan, Ronald Keeney, Philip Grunow, Donald Harju, Michael A. Daniel, Jal S. Jassawalla, and Peer M. Portner</i>	375

Track 1

Session 2 : Instrumentation for Cardiocirculatory Support — 2

Closed loop control of blood gases during surgical extracorporeal circulation — <i>N. Chauveau, W. Van Meurs, A. Lautier, and R. Barthelemy</i>	377
Basic considerations of ultrasonic air-bubble detectors for blood extracorporeal circulation — <i>Luiz Eduardo G. da Costa and João C. Machado</i>	380
The class-E concept for efficient wide-band coupling-insensitive transdermal power and data transfer — <i>C. M. Zierhofer and E. S. Hochmair</i>	382
Evaluation of comparative thrombogenicity of cellulose-acetate hemodialyzer in in vitro and in vivo system with radiolabeled platelets — <i>Mansoor Kapadvanjwala, George K. Panoutsopoulos, Carlos F. Cavagnaro, Loukia S. Tourkochoriti, and Mrinal K. Dewanjee</i>	384
Evaluation of the contribution of adsorption to the removal of LDL-cholesterol by cascade filtration — <i>C. Legallais, J. Wojcicki, and M. Y. Jaffrin</i>	386
Laser-Doppler measurements and visualization of pulsatile velocity field inside artificial heart — <i>František Klimeš</i>	388

Track 18

Session 1 : Heart Muscle Mechanics — 1

Real-time measurement of sarcomere length changes during contraction of single heart cells using a phase-locked loop — <i>Sha-zhou Zou and Leslie Tung</i>	390
Measurement of dynamic cellular and sarcomere contractile properties from the same cardiocyte — <i>Rupak Mukherjee, Francis G. Spinale, and Fred A. Crawford</i>	392
A simulation model for cardiac muscle in relaxation — <i>Lale Ozer and Yekta Ulgen</i>	394

447	Predictable time structure of blood pressure in human pregnancy — D. E. Ayala and R. C. Hermida
445	vascular system — <i>John N. Moore and William P. Santamore</i>
443	A theoretical analysis of the attenuation of respiratory variations in systemic venous return by the heart chambers and pulmonary
441	Mathematical model of pressure-related changes in stenosis cross-sectional area during the cardiac cycle — <i>Maria Siebes</i>
439	Investigation of post vagal tachycardias by analysis of the dynamics of cardiac period responses — <i>Nigel Lovell and Branko Celler</i>
436	A new phenomenological model of coronary autoregulation — <i>Karen L. Platt-Naim, Ofer Barnea, Thomas W. Moore, and Dov E. D. J. ter Keurs, Merrill L. Knudtson, and John V. Tyberg</i>
434	An optical device to measure the dynamics of apex rotation of the left ventricle — <i>Rafael Beyar, Carol A. Gibbons Kroeker, Henk Jaron</i>
Session 5 : Hemodynamics — 1	
Track 18	
434	An explicit model for noninvasive measurement of blood samples — Dagan Feng
431	A neural network model of the baroreceptor reflex — <i>Ferenc P. Czelegdy and Jose Katz</i>
429	A heart and circulation model with emphasis on short-term regulation — A. Urbaszek, H. Hutten, and M. Schaldach
427	Simple cardiorespiratory model for interpreting post-operative patient data — <i>E. Arfoll, G. Avanzolini, P. Barbini, and G. Gnudi</i>
425	A model of some short term mechanisms controlling systemic pressure — <i>P. Di Giammarco, M. Ursino, M. Antonucci, and E. Belardinelli</i>
Session 4 : Cardiovascular Models — 4	
Track 18	
423	Fluid dynamic and plaque formation in a numerical model of aorto coronary bypass — <i>Fabio Inzoli, Roberto Fumero, and Francesco Migliaiavacca</i>
421	Wall shear stress in stenotic artery — <i>Silvio Cavalcanti</i>
419	Analysis of arterial waves by the single-pulse-response in time domain — <i>Chen-Chin Lee, Hann-Shi Chow, and Roger G. Mark</i>
417	Vasoreactivity influence on noninvasively determined regional peripheral compliance — <i>Emilio A. Lopez-Beltran, Perry L. Blackshear, and Stanley M. Finkelslein</i>
414	A nonlinear method for the analysis of forward and reflected waves in elastic conduits — <i>N. Stergiopoulos, Y. Tardy, and J.-J. Meister</i>
Session 3 : Arterial Mechanics — 3	
Track 18	
412	Videodensitometric measurements in contrast-echocardiography: A quantitative method for assessment of right ventricular function — <i>Tomas Gustavsson, Marie Beckman-Suurkula, and Stefan Nivali</i>
410	Left ventricle modeling by discrete polar Fourier transform using echocardiogram images — <i>Christophe Léger, Jacques Thiel, Roger Ledée, Frédéric Patai, and Léandre Pourcelot</i>
408	Noninvasive technique for monitoring of left ventricular filling dynamics — <i>Gary Drzewiecki, John K.-J. Li, and Shawn Field</i>
406	Surface stretch analysis of the heart using tagged magnetic resonance imaging in 3-D — <i>Haim Azhari, James L. Weiss, Walter J. Rogers, and Edward P. Shapiro</i>
405	A generalised left ventricular dynamic compliance model: The chemo-mechanical capacitive transducer — <i>J. LeFevre and A. Tavernier</i>
403	Systemic elastance and oxygen consumption based on the Alternative Starling curve — <i>Peter L. M. Kerkhof</i>
Session 2 : Ventricular Dynamics — 2	
Track 18	
400	Inducing and suppressing ventricular fibrillation: A simulation study with three-dimensional heart model and experimental data — <i>Daming Wei, Osamu Okazaki, Kenichi Harumi, Eishi Harasawa, and Toshimitsu Musha</i>
398	Ventricular wall stress mapping proves the dualistic organization of the myocardial structure — <i>Paul P. Lunkenheimer and Klaus Redmann</i>
396	The ventricular wall as a composite material including muscle fibres and coronary vessels — <i>Riccardo Pierabissa, Alberto Redaelli, Franco Maria Montevocchi, and Roberto Fumero</i>

Computer analysis of portal hemodynamics after portacaval shunt — J. Peng, P. Rusch, J. G. Balique, A. Elboustini, C. Soler, C. Anne, M. Voutay, and J. C. Healy	449
Track 18	
Session 6 : Blood Flow and Pressure Measurements — 6	
Pre ejection period—PEP as measure for the inotropic status of the heart — A. M. Pichlmaier and M. Schaldach	451
A system for myocardial perfusion assessment based on video- and RF-data analysis — W. Thomas, R. M. Schmitt, H. Mudra, V. Klauss, B. Bresser, H. J. Schmidt, and O. Meisner	453
Echocardiographic Doppler velocity contour computation from acoustic signal — Sándor J. Kovács and Andrew F. Hall	455
A dedicated system for acoustic detection of coronary artery disease—ADCAD — Vasant Padmanabhan and John Semmlow	457
Laser doppler study of intracardiac jets: Validation and applications of M mode color Doppler imaging for studying the jet development in pulsatile conditions — B. Diebold, A. Delouche, P. Delouche, J.-P. Rinaldi, P. Acar, P. Dumée, and P. Péronneau	459
Velocity fields in the stenosed porcine abdominal aorta: A comparison between pulsed Doppler ultrasound and hot-film anemometry — W. Y. Kim, E. M. Pedersen, H. Nygaard, L. Sømø, J. M. Hasenkam, and P. K. Paulsen	461
Track 18	
Session 7 : Cardiovascular Signal Processing — 7	
Spectral characteristics of regional hemodynamics — M. Di Rienzo, P. Paleari, A. Daffonchio, A. U. Ferrari, G. Parati, and P. Castiglioni	463
1/f-modelling of blood pressure and heart rate spectra: Relations to ageing — P. Castiglioni, A. Frattola, . Parati, and M. Di Rienzo ..	465
Autoregressive parameterization of cardiovascular control: Comparison with Fourier techniques — John K. Triedman, Michael Perrott, and J. Philip Saul	467
Noninvasive detection of diabetic patients using multi-harmonic analysis — Amit Chatterjea, Eldred Littlefield, and Joseph Ladowski	469
Geometric analysis of cardiovascular dynamics during sleep and wakefulness — Mitsuyuki Nakao, Hiroshi Takagi, Satoshi Yokote, Yoshinari Mizutani, Mitsuaki Yamamoto, Masanori Munakata, Yutaka Imai, and Keishi Abe	471
Respiration related changes of PCG model parameters — Ahmet Baykal, Y. Ziya Ider, and Hayrettin Koymen	473
Track 18	
Session 8 : Hemodynamics — 2	
Physiological monitoring in the absence of gravity — Arnauld E. Nicogossian and Karen K. Gaiser	475
Classification of bioprosthetic valve closure sounds by a neural network using linear prediction coefficients — Zhenyu Guo, Louis-Gilles Durand, Howard C. Lee, Louis Allard, and Paul D. Stein	477
Intracranial pressure dynamics in patients with severe head injury: A mathematical study — M. Ursino and N. Stocchetti	479
Linear and non-linear effects in the beat-by-beat variability of sympathetic discharge in decerebrate cats — Giuseppe Baselli, Alberto Porta, Nicola Montano, Tomaso Gneccchi-Ruscione, Federico Lombardi, and Sergio Cerutti	482
Thrombogenicity of angiographic catheters: Comparative and rheological study on human blood ex vivo in angiographic conditions — A-L. Bailly, A. Laurent, G. Guiffant, J. Dufaux, and J. J. Merland	484
Analysis of electrokinetic effects in transcapillary exchange — Dana J. Hewitt, E. James Davis, and James B. Bassingthwaight ...	486
Track 26	
Session 1 : ECG and Signal Processing — 1	
The state of the art in high resolution electrocardiography — Edward J. Berbari and Paul Lander	488
Ventricular late potentials studied by nonstationary signal analysis — Hartmut Dickhaus, Labib Khadra, Alexandra Lipp, and Mark Schweizer	490
Subband analysis of cardiac late potentials — Owe Svensson and Leif Sörnmo	492
Signal processing methods to improve high resolution ECG signal averaging — Luis G. Herrera-Bendezú, Bart G. Denys, and P. S. Reddy	494
An innovative two-channel rate and morphology method for complex arrhythmia diagnosis in implantable devices — Chih-ming James Chiang, Janice M. Jenkins, and Lorenzo A. DiCarlo	496

Session 2 : ECG and Signal Processing — 2

- 498 Studies of alignment methods for averaging of high-resolution cardiac signals — *Shen Luo, Willis J. Tompkins, and Jaeho Kim*
- 500 Filtered vector cardiography: Analysis of loop characteristics in normal subjects — *M. Maniha, G. Ramachandran, and S. Swarnamani*
- 502 Time-varying filters for ECG processing — *Jiri Holcik, Jiri Kozumplik, and Ivo Provanzik*
- 504 Frequency analysis of high resolution ECG using autoregression methods — *R. Maniowski, M. Kohnitnicki, P. Lewandowski, A. Liebert, and T. Palko*
- 506 Short term oscillations in systolic time intervals — *R. M. Negoescu, S. W. Forges, P. Goddard, D. C. Richardson, and Barbara Carlton*

Session 3 : ECG and Signal Processing — 3

- 508 Adaptive filtering of ECG baseline wander — *Pablo Laguna, Ramon Jané, and Pere Caminal*
- 510 The utility of autoregressive analysis in the evaluation of the high frequency ECG — *Z. Czyz, J. Leski, T. Petelcz, and Z. Flak*
- 512 Hilbert transform and Fourier descriptors to ECG signal analysis — *Ann A. Chang and Walter H. Chang*
- 514 Spectral analysis of the surface electrocardiogram in patients with Chagas disease — *Diego Jugo, Medina Ruben, and Carrasco Hugo*
- 516 The new recursive SVD for extracting FCG from maternal abdomen — *Luo Ping, Yu Li-ym, Zhou Li-gao, Ye Da-tian, and Liang Yu-hou*
- 519 Algorithm for QA interval as an index of cardiac contractility from telemetered data — *Michael Jacobson*

Session 4 : ECG and Signal Processing — 4

- A single-layer perceptron to discriminate non-sinus beats in ambulatory ECG recordings — *Fabio Baddini, A. Murali Tekalp, and Arthur J. Moss*
- 521 ECG waveform compression by recursive partitioning and decimated residual encoding — *Farzin G. Guilak*
- 523 ECG data compression techniques — *Salcedo Mocholl, A. Estelles Guizarro, E. Rodriguez Saz, J., and Corral Ferrero, J. M.*
- 525 An effective compression scheme for multilead ECG signals containing ectopic ventricular activation — *A. C. Linnenbank, J. G. C. Kennelmings, S. L. C. Mulwiyik, A. Peper, and C. A. Grimbergen*
- 527 Continuously variable duration hidden Markov models for ECG segmentation — *L. Thoraval, G. Carrault, and F. Mora*
- 529 Detection of ischemic episodes using the counterpropagation neural network — *M. G. S. Srinivizis, G. Stalidis, C. Pappas, and N. Maglaveras*
- 531

Session 5 : ECG and Signal Processing — 5

- Isolation of ventricular extrasystolic signals from the preceding heart activity by adaptive filtering — *Klaus Abraham-Fuchs, Peter Strobach, Wolfgang Härer, Johann Uebler, Matthias Gebhardt, Stephan Achenbach, and Werner Moshage*
- 533 Comparison of computerized exercise ECG parameters in detecting myocardial ischemia — *Rami Lehtinen, Harri Stevönen, and Jukka Malinva*
- 535 Quantitative effects of acute myocardial infarction on intracavitary potentials — *Amy L. Hilgier, Frank J. Claydon, Leslie A. Ingram, and David M. Mirvis*
- 537 Detection of significant variations of the ST segment for the determination of ischemic episodes — *J. Presedo, S. Barro, F. Palacios, R. Ruiz, J. Vila, and A. Bugarrin*
- 540 Magneto-cardiographic mapping of reentry tachycardias—A new non invasive method to localize concealed accessory pathways — *Riccardo R. Fenici and Guido Melillo*
- 542 Preliminary evaluation in clinical applications of frequency spectrum electrocardiogram — *Zhang Li Ping, Zuo Lin, and Gu De Zhi*
- 544

Track 26

Session 6 : ECG and Signal Processing — 6

Filtering techniques for ventricular late potentials analysis — Raimon Jané, Pablo Laguna, and Pere Caminal	545
Adaptive enhancement of ventricular late potentials using orthogonal beat-by-beat recordings — Weiqun Yang, Leo G. Horan, and Nancy C. Flowers	547
Quantitative assessment of beat-to-beat variability in ambulatory ECG recordings — J. Fayn, S. Hamidi, P. Maison-Blanche, P. Coumel, and P. Rubel	549
Consecutive single-beat recordings provide a new technique in high resolution ECG analysis — Zvonko Trontelj, Ralf Boussejot, Norbert Eckhardt, Dieter Kreiseler, Michael Oeff, and Allard Schnabel	551
Respiration affects on P wave alignment and averaging — M. C. Saki, Y. Z. Ider, B. Ozin, and A. Oto	553
A new parallel concept for QRS complex detector — Jacek Leski and Ewaryst Tkacz	555

Track 26

Session 7 : ECG and Signal Processing — 7

Time-variant AR spectral estimation in the study of vasovagal syncope — A. Bianchi, L. Mainardi, R. Furlan, S. Piazza, A. Montefusco, A. Malliani, and S. Cerutti	557
Analysis of heart rate variability: Comparison between spectra obtained from ECG and finger blood pressure — M. Karrakchou, J. M. Vesin, S. Laberer, and E. Pruvot	559
Automatic QRS detection during body surface mapping of ventricular tachycardia — J. G. C. Kemmelings, A. C. Linnenbank, S. L. C. Mulwijk, A. SippensGroenewegen, A. Peper, and C. A. Grimbergen	561
Classification of normal and widened QRS complexes in ambulatory ECG — Jens P. Müller, Rüdiger Poll, and Iris Kirschner	563
Multiresolution decomposition of heart rate fluctuations during carotid surgery using wavelet transform — Metin Akay, Giora Landesberg, Walter Welkowitz, Yasemin M. Akay, and Dan Sapoznikov	565
HIS bundle potential detection by multichannel adaptive filtering — Gengxin Chen, Banyang Qi, and Yu Tang	567

Track 26

Session 8 : ECG and Signal Processing — 8

Time-variant estimation of the spectral parameters of heart rate variability — L. Mainardi, G. Baselli, A. Bianchi, M. G. Signorini, and S. Cerutti	569
Heart rate variability study using phase response curve — Pei Z. Zhang, Stanely S. Reisman, and Walter N. Tapp	571
DSP-based on-line QRS detection with subsequent on-line R-R interval/respiration monitoring — D. Haese, U. J. Scholz, L. Mainardi, and F. Behse	573
Analysis of heart rate variability with evenly spaced time values — J. Vila, S. Barro, J. Presedo, R. Ruiz, and F. Palacios	575
Classification of magnetocardiographic- and combined and electromagnetocardiographic measurements — Kari Salminen, Sakari Oja, and Jaakko Malmivuo	577
Correlation of the vector magnetocardiogram with the vector electrocardiogram in normal subjects and in anterior and inferior myocardial infarction — Juha Nousiainen, Sakari Oja, , and Jaakko Malmivuo	579

Track 28

Session 1 : Electrophysiology - Simulation and Modeling — 1

Model studies of cardiac arrhythmias: Reentry and arrhythmogenic activity of the single cell — Yoram Rudy	581
An equivalent generator representation of measured intracavitary potentials — Frank J. Claydon, Kerry L. Milligan, Thomas E. Gray, and David M. Mirvis	582
Electronic simulation of action potential propagation — Jiguang Ge and Nicholas Sperelakis	584
A model of stimulus frequency effects on the rabbit atrial myocyte — Douglas S. Lindblad, John W. Clark, C. Richard Murphey, and Wayne R. Giles	586
The crista terminalis cell in the rabbit heart: A model — Semahat S. Demir, John W. Clark, and Wayne R. Giles	587

589	Mechanisms underlying the propagation of activation in cardiac tissue — <i>Fernand A. Roberge</i>
591	Use of a heterogeneous model for localization of ventricular surface activation map: critical points: Numerical simulations and animal experiments — <i>Fred Greensite, Qian Jia-Jin, and Lars Kjaergaard</i>
593	Adaptive grid generation — <i>John Schmidt, James Eason, and Theo Pilkington</i>
594	Finite element error estimates and adaptive grid refinement — <i>James Eason, John Schmidt, and Theo Pilkington</i>
596	Relating tortuosity and extracellular potentials in a two-dimensional model of ventricular myocardium — <i>N. Maglaveras, F. J. L. Van Cappelle, J. De Bakker, M. Alessie, A. V. Sahakian, M. Sirtinzi, and C. Pappas</i>
Track 28	
Session 2: Electrophysiology - Simulation and Modeling — 2	
598	Propagation under the influence of interstitial potentials — <i>Roger C. Barr and Robert Plonsey</i>
600	Effect of interstitial anisotropy and the extracellular volume conductor on action potential morphology in a thin layer of cardiac tissue — <i>Craig S. Henriquez and Nigel F. Hooke</i>
602	Comparison of iterative methods for the determination of the interstitial potential distribution with the bidomain model — <i>Andrew E. Pollard, Natalia Trayanova, and Craig S. Henriquez</i>
604	Figure-of-eight reentry in a model of cardiac tissue — <i>L. Joshua Leon</i>
606	The effect of nonuniform anisotropy on wavefront stability in a finite element model of cardiac action potential propagation — <i>Jack M. Rogers and Andrew D. McCulloch</i>
608	Influence of cardiac anisotropy on extracellular potentials generated by dipolar sources: A simulation study — <i>Ennio Macchi, Gino Di Cola, Luciano Guerri, Massimo Manghi, Nicol Pennacchio, and Bruno Taccardi</i>
Track 28	
Session 3: Electrophysiology - Simulation and Modeling — 3	
610	Effects of the lower frequency limit on determining high frequency power of heart rate fluctuations — <i>Dan Sapozhnikov, Myron H. Luria, Roni Maki, and Mervyn S. Gotsman</i>
612	Improved parametric models and DPCM techniques for ECG data compression — <i>Budagavi Madhukar, L. M. Patnaik, and I. S. N. Murthy</i>
614	Multichannel selective linear prediction spectrum analysis for detection of cardiac late potentials — <i>U. C. Niranjan and I. S. N. Murthy</i>
616	The effect of respiration on the paced depolarization integral — <i>Richard M. T. Lu and Albert K. Dawson</i>
618	Importance of radial sensitivity in detection of ischemic injury currents — <i>Jari Hyttinen, Jari Viik, Hannu Eskola, and Jaako Malmvuo</i>
620	Digital model for electrocardiogram — <i>M. R. S. Reddy</i>
Track 32	
Session 1: Fibrillation and Defibrillation — 1	
623	Effect of local ischemia on induction of cardiac reentries — <i>Pierre Auger, Soumya Achour, Philippe Dumé, Reda Farah, Marie-Claude Govaere, Dominique Von Eux, and Alain Bardou</i>
626	Reentry in non-uniformly anisotropic ventricular myocardium—Simulation and visualization in a computer model — <i>Michael D. Lesh, Ashutosh Goel, and William J. Gibb</i>
628	Estimate of electromotive surface dimension during ventricular fibrillation — <i>Francis X. Witkowski, Patricia A. Penkoske, and Katherine M. Kavanagh</i>
631	Implications of electrically-induced action potential propagation for reentry induction in the heart — <i>Stephen B. Knisley, Bruce C. Hill, William M. Smith, and Raymond E. Ideker</i>
633	Fast optical potential mapping in single cardiomyocytes during field stimulation — <i>H. Windisch, H. Ahammer, P. Schaffer, Müller, and D. Plaizer</i>
634	

Track 32

Session 2 : Fibrillation and Defibrillation — 2

A study of energy requirements for defibrillation using various shocking sequences — <i>Rajesh Pendekanti, Theo C. Pilkington, and Raymond E. Ideker</i>	636
Postshock dysfunction induced by simulated one- and two capacitor defibrillator waveforms — <i>Janice L. Jones, Kevin Milne, and Ronald E. Jones</i>	638
Recursive Bayesian estimation of effective defibrillation shock intensities — <i>L. M. Rust and J. B. Jordan</i>	640
Simulation of excitation of single cardiomyocytes under field stimulation — <i>D. Platzer and H. Windisch</i>	642
Simulations of electrical field stimulation of cardiac myocytes during the relative refractory period — <i>Leslie Tung and Sandeep K. Jain</i>	644

Track 32

Session 3 : Fibrillation and Defibrillation — 3

The European clinical experience of 400 patients with a multizone automatic implantable cardioverter defibrillator, Ventak PRx — <i>Stephen A. O'Connor</i>	646
A three-dimensional heart-torso model for cardiac defibrillation — <i>A. Vahid Shahidi and Pierre Savard</i>	649
Comparison study of different numerical methods on 3-D human thorax finite element models — <i>B. Guan, D. R. Haynor, D. E. Blilie, C. H. Chan, and Y. Kim</i>	651
Generation of an anatomically correct human thorax finite element model — <i>D. E. Blilie, Y. Kim, D. H. Haynor, B. Guan, and C. Chan</i>	653
Fibrillation frequency and ventricular defibrillation — <i>J. D. Allen, A. J. Stewart, E. J. F. Carlisle, W. G. Kernohan, and A. A. J. Adgey</i>	655
The accuracy of decision-making of a semi-automatic defibrillator during cardiac arrest — <i>Jennifer Adgey, W. Dickey, G. W. N. Dalzell, and J. Anderson</i>	657

Track 32

Session 4 : Fibrillation and Defibrillation — 4

Constructing activation time series from local and regional unipolar waveform analysis — <i>A. Vinet, R. Cardinal, and P. Pagé</i>	659
Early afterdepolarizations in a model of cardiac cells — <i>William J. Gibb and Michael D. Lesh</i>	661
Influence of vecuronium bromide on the ED50 for electrical ventricular defibrillation in the canine model — <i>W. C. McDaniel, M. Sullivan, Q. Zhang, M. Hogan, and C. Wagner-Mann</i>	663
Ventricular fibrillation detection by adaptive algorithm — <i>Dan Li, Yi-Sheng Zhu, and Wen-hao Wu</i>	665
Transoesophageal defibrillation — <i>J. A. Anderson, S. Croal, P. Mckeown, D. J. Cochrane, and A. A. J. Adgey</i>	667

Track 37

Session 1 : Hemodynamics and Biorheology — 1

Micromechanical behavior of neutrophils via micropore filtration approach — <i>K. S. Nikita, N. K. Uzunoglu, and D. Koutsouris</i>	669
Flow of a red blood cell through a filter pore — <i>A. Leyrat-Maurin</i>	671
Digital simulation in the analysis of the fluid distribution at the heart — <i>L. Roa and T. Gómez-Cía</i>	673
Experimental determination of red blood cell mechanical properties — <i>A. Drochon, D. Barthès-Biesel, C. Bucherer, C. Lacombe, and J. C. Lelievre</i>	675
Left ventricular compliance pumping and arterial system wave reflection — <i>David S. Berger, John K-J Li, Warren K. Laskey, and Abraham Noordergraaf</i>	677
Adaptive resources of vascular wall to fluid shear stress induced by blood flow — <i>Akira Kamiya, Joji Ando, and Mitra Sohirad</i>	679

Track 38

Session 1 : The Lungs and Pulmonary Circulation — 1

Compensation of two important non-linearities in the globally linear mechanical behavior of the human lung — <i>C. Renotte, M. Remy, P. Saucez, and M. Mauroy</i>	681
Application of Wiener's theory to nonlinear analysis of respiratory gas exchange system — <i>Shahin D. Ghazanshahi</i>	684

687	Negative pressure oesophageal electroventilation — <i>David J. Cochran, G. J. Dempsey, D. Allen, J. A. Anderson, and A. A. J. Adgey</i>
689	Noninvasive cardiac output estimates during quiet respiration through partial CO ₂ rebreathing — <i>Marcos F. Vidal Melo, Marcelo G. Abreu, and Antonio Giannelis-Neto</i>
691	Adaptive heart-noise reduction of lung sounds recorded by a single microphone — <i>Martin Kompis and Erich Rassi</i>
693	Accurate calibration of pneumotachographs using a syringe and polynomial curve fitting — <i>Antonio Giannelis-Neto, Marcio J. O. do Vale, and Marcos F. Vidal Melo</i>
Track 38	
Session 2 : The Lungs and Pulmonary Circulation — 2	
695	Airway heal and gas exchange — <i>M. P. Hlastala</i>
697	Airway area by acoustic reflection: A new technique — <i>B. Louis, D. Isaby, and J. J. Fredberg</i>
699	Continuous estimation of pulmonary blood flow using respiratory inert gas analysis — <i>K. Gan, M. Akagi, S. P. Ribeiro, and A. S. Slutsky</i>
701	Modeling pulmonary perfusion and gas exchange during acceleration stress in humans — <i>Pierre Vieyres, Thomas W. Moore, and Dov Jaron</i>
703	The influence of body temperature on a model of the human respiratory system — <i>Craig Tuffnell, Kathy Garden, Rodney Ford, and Jeff Brown</i>
Track 40	
Session 1 : Instrumentation in Cardiology — 1	
705	New concepts in electrotherapy of the heart — <i>M. Schaldach and H. Hulten</i>
707	Multi-detector gamma probe (12 CDTB) for monitoring of the left ventricular function — <i>C. Scheiber, M. Karim, C. Draman, P. Atali, P. Sifferl, and J. Chambron</i>
709	CsI multidetector RF-transmitted radiotopic monitoring of the left ventricular ejection fraction — <i>Hedi Bedoui, Alain Millaire, Jean Rousseau, Claude Houssein-Foucher, Gérard Ducoux, and Xavier Marchandise</i>
711	A microprocessor based ambulatory data storage system for ECG and left ventricular cardiac function monitoring — <i>M. Karim, C. Scheiber, C. Draman, P. Atali, P. Sifferl, and J. Chambron</i>
713	Microwave ablation of the myocardium with a monopole antenna — <i>Sylvain Labonit, Anthony S. L. Tang, and Virginia M. Walley</i>
Track 40	
Session 2 : Instrumentation in Cardiology — 2	
715	Sources of conductance volumetric measurement errors — <i>Stevan Kun and Robert A. Peura</i>
717	Laser Doppler perfusion imaging in coronary by-pass surgery — <i>K. Wårdell, U. Hermansson, H. C. v. Ahn, and G. E. Nilsson</i>
720	Analysis techniques for pulsatile components of cardiac near infra-red absorbance measurements — <i>Ralph Houston, Gordon Wright, Yapa Wickramasinghe, Maureen Thorniley, and Peter Rojse</i>
722	Chronic instrumentation for right heart cardiovascular studies in a human surrogate model — <i>C. D. White, S. C. Koenig, J. W. Fanton, R. D. Latham, D. A. Self, R. W. Owens, and R. E. Mendenhall</i>
724	Experimental validation of a model for radio-frequency ablation — <i>Sylvain Labonit and George Costache</i>
Track 40	
Session 3 : Instrumentation in Cardiology — 3	
726	Instrumentation for the recording and digital processing of multichannel ECG data — <i>C. A. Grimbergen, A. C. MeitingVanRijn, A. P. Kuiper, A. C. Limmenbank, and A. Peper</i>
728	Instrumented humans during parabolic flight — <i>Steven C. Koenig, Curtis D. White, Ron E. Mendenhall, Gary Minuza, and Tim Ferguson</i>
730	Changes in the finger artery compliance and elasticity as a function of temperature — <i>Sijian Zhang, Robert Patterson, Jay N. Cohn, and Li Wang</i>
732	Cardiac synchronised data acquisition and analysis of physiological variables — <i>Branko Celler and Nigel Lovell</i>
734	Seismic life detector for battlefield casualty assessment — <i>H. Herbert Peel, Jonathan P. Jaeb, and Reuben W. Edgar, Jr.</i>

Track 64

Session 2 : Poster Presentation 2 - Cardiology

In vitro study of unimplanted and explanted specimens from biomer blood sacs of ventricular assist devices — <i>P. Chistolini, R. Bedini, G. De Angelis, G. Formisano, and S. Caiazza</i>	737
In vitro experiments: Circulatory assist device interaction with a virtual cardiovascular system — <i>Massimo Pillon, Hervé Duffour, and Marcel Jufer</i>	740
A faster procedure for the noninvasive transient thermal clearance method for skin blood flow measurement and several applications — <i>M. Nitzan, Y. Mahler, C. Gross, and Z. Weshler</i>	742
Comparison of invasive and noninvasive blood pressure measurements for determining cardiac output in man — <i>M. H. Winter, P. Escourrou, M. D. Goldman, M. Slama, L. Drieu, and M. Jaffrin</i>	744
A new method to classify blood pressure time series — <i>María J. Rodríguez, Francisco del Pozo, María Arredondo, Enrique J. Gómez, and José L. Palma</i>	746
Sensitivity analysis of a simple cardiorespiratory model in postoperative cardiac patients — <i>F. Grandi, E. Artioli, G. Avanzolini, and A. Cappello</i>	748
Circadian and ultradian blood pressure variability assessed by periodic regression — <i>A. Mojón, R. C. Hermida, J. R. Fernández, and D. E. Ayala</i>	750
Simulation study of optimal configuration and control of multi-chamber balloon for IABP — <i>Jing Bai and Hang Lin</i>	752
Computer-assisted multi-level model of the penile artery circulation — <i>G. Tritto</i>	754
Prediction of arterial pressure during hemodialysis using electrical impedance — <i>E. R. Rosa, M. F. Vidal Melo, A. Giannella Neto, and R. B. Panerai</i>	756
Arterial compliance variation throughout the cardiac cycle — <i>Ying Zhu, John K.-J. Li, and Gary Drzewiecki</i>	758
Verification of the modified windkessel model of the arterial vasculature — <i>Sijian Zhang, Stanley M. Finkelstein, and Jay N. Cohn</i> ..	760
An evaluation of adaptive line enhancement for the beat-to-beat detection of late potentials — <i>Robert H. Mitchell, Kieran Kelly, and Omar Escalona</i>	762
An ambulatory ECG mapping system — <i>X. Huang, M. J. English, and R. Vincent</i>	764
A real time heart rate variability analysis system using a synchronous language signal — <i>C. Médigue, J. Clairambault, and L. Curzi-Dascalova</i>	766
New criteria for analysis of ventricular late potentials using high-resolution electrocardiography — <i>E. Piatkowska-Janko, A. Piatkowski, G. Opolski, and M. Cieciora</i>	768
The relationships between respiratory sinus arrhythmia and coronary heart disease risk factors — <i>Philippe Lopes, Robert H. Mitchell, and John A. White</i>	769
Comparison between ST depression and elevation in myocardial ischemia diagnosis — <i>Jari Viik, Jari Hyttinen, and Jaakko Malnivo</i>	771
Characterisation of micropotentials in high resolution ECGs by time-frequency and time-scale analysis — <i>B. Karoubi, F. Peyrin, D. Morlet, P. Rubel, P. Desseigne, and P. Touboul</i>	773
Adaptive ECG data compression based on multiple artificial neural networks — <i>Armando J. Pinho and Paulo J. Ferreira</i>	775
Fast iterative reconstruction of distorted ECG signals — <i>Paulo Jorge S. G. Ferreira</i>	777
An acquisition and processing system for the high resolution surface electrocardiogram — <i>Medina Ruben, Jugo Diego, Carrasco Hugo, Lobelo Ramiro, and Castillo Carlos</i>	779
Analysis of ECG by multipulse excited linear prediction model — <i>K. V. Sivakumar, U. C. Niranjana, and I. S. N. Murthy</i>	781
High frequency ECG in patients after surgical treatment of the CAD — <i>T. Petelenz, J. Leski, Z. Flak, and Z. Czyz</i>	783
A continuous representation of heart rate — <i>K. Han, J. H. Nagel, and N. Schneiderman</i>	785
Attribute grammar for analysis of ECG arrhythmias — <i>Shuqian Luo and Guohong Zhou</i>	787
Beat-to-beat 3 D activation patterns in the heart: Modeling the activation-refractoriness relationships — <i>Samuel Sideman, Orit Ronen, and Dan Adam</i>	789
Application of the heart model to simulating ventricle hypertrophy — <i>Xu Zhenyao and Fu Yinjie</i>	792
Cellular transtelephonic defibrillation — <i>G. W. N. Dalzell, P. P. McKeown, M. J. D. Roberts, J. Anderson, and A. A. J. Adgey</i>	794
Body surface mapping in mobile coronary care — <i>C. Cullen, G. J. Dempsey, G. T. H. Wright, E. T. McAdams, J. Anderson, and J. Adgey</i>	796
Cardiac fibrillation and heart weight — <i>Estela Ruiz and Max E. Valentinuzzi</i>	798
Investigation on pulsatile non-Newtonian blood flow through coronary arteries using electrical simulation technique — <i>Subir Kar and Jatin Mehta</i>	800
Analysis of the time course of renal vascular and excretory responses to electrical stimulation of the renal efferent nerves — <i>Branko Celler, Andrea Stella, Raffaello Golin, and Alberto Zanchetti</i>	802

829	Keyword Index
827	Author Index
829	Physical properties of flowing blood — <i>H. Kanai, M. Fujii, M. Niwa, and K. Sakamoto</i>
806	Investigation on autoregulation factor of blood viscosity in various diseases — <i>Jain Mehta and Subir Kar</i>
808	Experimental study of pure oscillatory flows in open tubes, closed tubes, and tubes terminating in a cavity — <i>Farid Mostehi, James R. Ligas, and Mary Anne Farrell Epstein</i>
810	Pulmonary plethysmography using radionuclide chest scintigraphy — <i>Meir Nitzan, Yona Mahler, Suzan Yaffe, Moshe Bocher, Chaim Karger, and Roland Chassin</i>
812	A high resolution cardiac mapping system — <i>Bin He, Eishi Harasawa, Tarik Alkasab, and Richard J. Cohen</i>
815	Balanced ABC-vectorgrammeter for biomagnetic research — <i>Anili Rissanen, Frank Giesler, and Jaakko Malmivuori</i>
817	A minilaboratory for use in the field of teaching and the biomedical research — <i>Angel R. Zapata Ferrer, Enrique Cruz F., Victor E. Márquez, Carlos Moncada J., Miguel A. Aguilón P., Laura Rivas, and Andrés Gaona G.</i>
819	Automated matching impedance: A solution for impedance increasing during intracardiac catheter ablation therapy session — <i>A. Staiquy, A. Rouane, M. Nadi, D. Kourliche, A. Hedjiedj, and G. Prieur</i>
821	An automated, on-line, PC-based system for analysis of the frequency-dependent effects of antiarrhythmic drugs on action potential duration, refractory periods, and conduction velocity, and on energy requirements for defibrillation — <i>Gregory N. Beatch, David R. Dickenson, Randall H. Wood, and Anthony S. L. Tang</i>
823	The ANS signal utilized to optimize surgical treatment of cardiomyopathies — <i>M. Schaldach and D. Bralle</i>
825	Comparative study and development of new intracardiac QRS detection algorithms — <i>Didier Henry, Michel Robert, Laurent Claudon, and Chik Yam Lee</i>
827	A modified bidomain model for extracellular potential for the active bundle of compound nerve fibres — <i>Tao Wang and Zhaoxia Fan</i>
829	A predictive circulatory model of blood pressure for hours — <i>Toshi Hiro Nishimura, Takeshi Inoue, and Masao Saito</i>
