Preface

The European Society for Artificial Intelligence in Medicine (AIME) was established in 1986 following a very successful workshop held in Pavia, Italy, the year before. The principal aims of AIME are to foster fundamental and applied research in the application of artificial intelligence (AI) techniques to medical care and medical research, and to provide a forum at biennial conferences for discussing any progress made. For this reason the main activity of the Society was the organization of a series of biennial conferences, held in Marseilles, France (1987), London, UK (1989), Maastricht, The Netherlands (1991), Munich, Germany (1993), Pavia, Italy (1995), Grenoble, France (1997), Aalborg, Denmark (1999), Cascais, Portugal (2001), Protaras, Cyprus (2003), and Aberdeen, UK (2005).

This volume contains the proceedings of AIME 2007, the 11th Conference on Artificial Intelligence in Medicine, held in Amsterdam, The Netherlands, July 7-11, 2007. The AIME 2007 goals were to present and consolidate the international state of the art of AI in biomedical research from the perspectives of methodology and application. The conference included invited lectures, a panel discussion, full and short papers, tutorials, workshops, and a doctoral consortium. In the conference announcement, authors were solicited to submit original contributions on the development of theory, systems, and applications of AI in medicine, including the exploitation of AI approaches to molecular medicine and biomedical informatics. Authors of papers addressing theory were requested to describe the development or the extension of AI methods and to discuss the novelty to the state of the art. Authors of papers addressing systems were asked to describe the requirements, design and implementation of new AI-inspired tools and systems, and discuss their applicability in the medical field. Finally, application papers were required to describe the implementation of AI systems in solving significant medical problems, and to present sufficient information to allow an evaluation of the practical benefits of such systems.

AIME 2007 received the second highest number of submissions ever (137). Submissions came from 31 different countries, including 12 outside Europe. All papers were carefully peer-reviewed by at least two experts from the Program Committee with the support of additional reviewers. The reviewers judged the quality and originality of the submitted papers, together with their relevance to the AIME conference. Four criteria were taken into consideration in judging submissions: the overall reviewers' recommendation, the suitability of the paper for an oral or poster presentation, the reviewers' detailed comments and the reviewers' confidence about the subject area. In a meeting held in Amsterdam during March, 24–25 a small committee consisting of the AIME 2007 Organizing Committee Chair, Ameen Abu-Hanna, the AIME President, Jim Hunter, and the AIME 2007 Program Chair, Riccardo Bellazzi, took the final decisions on the

AIME 2007 scientific program. As a result, 28 long papers (with an acceptance rate of about 20%) and 38 short papers were accepted. Each long paper was presented as an oral presentation, and was allocated a time of 25 minutes during the conference. Each short paper was presented as a poster. One of the novelties of AIME 2007 was a separate evening session combining poster presentations and dinner. Each poster was discussed with the help of two Poster Session Chairs.

The papers were organized according to their topics in eight main themes: 1) Agent-based systems; 2) Temporal data mining; 3) Machine learning and knowledge discovery; 4) Text mining, natural language processing and generation; 5) Ontologies; 6) Decision support systems; 7) Applications of AI-based image processing techniques; 8) Protocols and guidelines and 9) Workflow systems.

As another novelty, AIME 2007 had the privilege of hosting a panel discussion on “The Coming of Age of AI in Medicine,” organized and moderated by Vimla Patel (Arizona State University, USA). The distinguished panellists were Edward Shortliffe (University of Arizona College of Medicine, USA), Mario Stefanelli (University of Pavia, Italy), Peter Szolovits (Massachusetts Institute of Technology, Cambridge, MA, USA) and Michael Berthold (University of Konstanz, Konstanz, Germany). Peter Szolovits and Michael Berthold were also the invited speakers at AIME 2007. Peter Szolovits gave a talk on “Rationalism and Empiricism in Medical AI” and Michael Berthold on “The Fog of Data: Data Exploration in the Life Sciences.” The choice of these topics was partly related to the recent broadening of the field of AI in medicine and biomedical informatics, which now spans themes from clinical decision support to supporting research in genomics, proteomics and computational biology as applied to medicine and health care.

Following its first appearance at AIME 2005, a doctoral consortium, organized on this occasion by Jim Hunter, was held again this year. A scientific panel consisting of Carlo Combi, Michel Dojat, Frank van Harmelen, Elpida Keravnou, Peter Lucas, Silvia Miksch, Silvana Quaglini, and Yuval Shahar supported the selection of PhD student contributions and discussed the contents of the students’ doctoral theses.

As at previous AIME meetings, two full-day workshops were organized prior to the AIME 2007 conference: a workshop entitled “From Knowledge to Global Care,” organized by David Riaño, Rovira i Virgili University, Spain and Fabio Campana, CAD RMB, Rome, Italy, and the 12th workshop on Intelligent Data Analysis in bioMedicine and Pharmacology (IDAMAP 2007), organized by Allan Tucker, Brunel University, UK, and Carlo Combi, University of Verona, Italy, and sponsored by the IMIA working group on Intelligent Data Analysis and Data Mining.

Two half-day tutorials were given by John H. Holmes, University of Pennsylvania, USA: Introduction to Applied Clinical Data Mining and Advanced Applied Clinical Data Mining.

We would like to thank everyone who contributed to AIME 2007. First of all we would like to thank the authors of the papers submitted and the members of the Program Committee together with the additional reviewers. Thanks

are also due to the invited speakers, panellists, and the organizers of the workshops, tutorials and doctoral consortium. We would like to thank the Department of Medical Informatics at the Academic Medical Centre of the University of Amsterdam, which hosted and sponsored the conference. Finally, we thank the Netherlands Organization for Scientific Research (NWO), Medecs Decision Support Systems, and the BAZIS foundation for their sponsorship of the conference and the European Coordinating Committee for Artificial Intelligence (ECCAI) and the International Medical Informatics Association (IMIA) for their support.

Panel

The Coming of Age of AI in Medicine

Organizer: Vimla L. Patel, Arizona State University, USA

Workshops

From Knowledge to Global Health Care

Co-chairs: David Riaño, Rovira i Virgili University, Spain, Fabio Campana, CAD RMB, Italy

IDAMAP 2007: Intelligent Data Analysis in bioMedicine and Pharmacology

Co-chairs: Carlo Combi, University of Verona, Italy, Allan Tucker, Brunel University, UK

Tutorial

Introduction to Applied Clinical Data Mining

John H. Holmes, University of Pennsylvania, USA

Advanced Applied Clinical Data Mining

John H. Holmes, University of Pennsylvania, USA

Table of Contents

Agent-Based Systems

A Human-Machine Cooperative Approach for Time Series Data Interpretation	3
<i>Thomas Guyet, Catherine Garbay, and Michel Dojat</i>	
MRF Agent Based Segmentation: Application to MRI Brain Scans	13
<i>B. Scherrer, M. Dojat, F. Forbes, and C. Garbay</i>	
R-CAST-MED: Applying Intelligent Agents to Support Emergency Medical Decision-Making Teams	24
<i>Shizhuo Zhu, Joanna Abraham, Sharoda A. Paul, Madhu Reddy, John Yen, Mark Pfaff, and Christopher DeFlitch</i>	
Knowledge-Based Modeling and Simulation of Diseases with Highly Differentiated Clinical Manifestations	34
<i>Marjorie McShane, Sergei Nirenburg, Stephen Beale, Bruce Jarrell, and George Fantry</i>	
Co-operative Agents in Analysis and Interpretation of Intracerebral EEG Activity: Application to Epilepsy	44
<i>Mamadou Ndiaye, Abel Kinie, and Jean-Jacques Montois</i>	
An Ontology-Driven Agent-Based Clinical Guideline Execution Engine	49
<i>David Isern, David Sanchez, and Antonio Moreno</i>	

Temporal Data Mining

An Intelligent Aide for Interpreting a Patient's Dialysis Data Set	57
<i>Derek Sleeman, Nick Fluck, Elias Gyftodimos, Laura Moss, and Gordon Christie</i>	
Temporal Data Mining with Temporal Constraints	67
<i>M. Campos, J. Palma, and R. Marín</i>	
A Nearest Neighbor Approach to Predicting Survival Time with an Application in Chronic Respiratory Disease	77
<i>Maurice Prijs, Linda Peelen, Paul Bresser, and Niels Peek</i>	
Using Temporal Context-Specific Independence Information in the Exploratory Analysis of Disease Processes	87
<i>Stefan Visscher, Peter Lucas, Ildikó Flesch, and Karin Schurink</i>	
Discovery and Integration of Organ-Failure Episodes in Mortality Prediction	97
<i>Tudor Toma, Ameen Abu-Hanna, and Robert-Jan Bosman</i>	

Machine Learning and Knowledge Discovery

Contrast Set Mining for Distinguishing Between Similar Diseases	109
<i>Petra Kralj, Nada Lavrač, Dragan Gamberger, and Antonija Krstačić</i>	
Multi-resolution Image Parametrization in Stepwise Diagnostics of Coronary Artery Disease	119
<i>Matjaž Kukar, Luka Šajn, Ciril Grošelj, and Jera Grošelj</i>	
Classifying Alarms in Intensive Care - Analogy to Hypothesis Testing	130
<i>Wiebke Sieben and Ursula Gather</i>	
Hierarchical Latent Class Models and Statistical Foundation for Traditional Chinese Medicine	139
<i>Nevin L. Zhang, Shihong Yuan, Tao Chen, and Yi Wang</i>	
Interpreting Gene Expression Data by Searching for Enriched Gene Sets	144
<i>Igor Trajkovski and Nada Lavrač</i>	
Variable Selection for Optimal Decision Making	149
<i>Lacey Gunter, Ji Zhu, and Susan Murphy</i>	
Supporting Factors in Descriptive Analysis of Brain Ischaemia	155
<i>Dragan Gamberger and Nada Lavrač</i>	
Knowledge Acquisition from a Medical Corpus: Use and Return on Experiences	160
<i>Lina F. Soualmia and Badisse Dahamna</i>	
Machine Learning Techniques for Decision Support in Anesthesia	165
<i>Olivier Caelen, Gianluca Bontempi, and Luc Barvais</i>	
Learning Decision Tree for Selecting QRS Detectors for Cardiac Monitoring	170
<i>François Portet, René Quiniou, Marie-Odile Cordier, and Guy Carrault</i>	
Monitoring Human Resources of a Public Health-Care System Through Intelligent Data Analysis and Visualization	175
<i>Aleksander Pur, Marko Bohanec, Nada Lavrač, Bojan Cestnik, Marko Debeljak, and Anton Gradišek</i>	
An Integrated IT System for Phenotypic and Genotypic Data Mining and Management	180
<i>Angelo Nuzzo, Daniele Segagni, Giuseppe Milani, Cinzia Sala, and Cristiana Larizza</i>	
Automatic Retrieval of Web Pages with Standards of Ethics and Trustworthiness Within a Medical Portal: What a Page Name Tells Us	185
<i>Arnaud Gaudinat, Natalia Grabar, and Célia Boyer</i>	

A Mixed Data Clustering Algorithm to Identify Population Patterns of Cancer Mortality in Hijuelas-Chile	190
<i>Eileen Malo, Rodrigo Salas, Mónica Catalán, and Patricia López</i>	
Novel Features for Automated Lung Function Diagnosis in Spontaneously Breathing Infants	195
<i>Steffen Leonhardt and Vojislav Kecman</i>	
Multi-level Clustering in Sarcoidosis: A Preliminary Study	200
<i>V.L.J. Karthaus, H.H.L.M. Donkers, J.C. Grutters, H.J. van den Herik, and J.M.M. van den Bosch</i>	
Text Mining, Natural Language Processing and Generation	
An Experiment in Automatic Classification of Pathological Reports	207
<i>Janneke van der Zwaan, Erik Tjong Kim Sang, and Maarten de Rijke</i>	
Literature Mining: Towards Better Understanding of Autism	217
<i>Tanja Urbančić, Ingrid Petrić, Bojan Cestnik, and Marta Macedoni-Lukšić</i>	
Automatic Generation of Textual Summaries from Neonatal Intensive Care Data	227
<i>François Portet, Ehud Reiter, Jim Hunter, and Somayajulu Sripada</i>	
Anonymisation of Swedish Clinical Data	237
<i>Dimitrios Kokkinakis and Anders Thulin</i>	
MetaCoDe: A Lightweight UMLS Mapping Tool	242
<i>Thierry Delbecque and Pierre Zweigenbaum</i>	
Unsupervised Documents Categorization Using New Threshold-Sensitive Weighting Technique	247
<i>Frederic Ehrler and Patrick Ruch</i>	
Application of Cross-Language Criteria for the Automatic Distinction of Expert and Non Expert Online Health Documents	252
<i>Natalia Grabar and Sonia Krivine</i>	
Extracting Specific Medical Data Using Semantic Structures.....	257
<i>Kerstin Denecke and Jochen Bernauer</i>	
Ontologies	
Using Semantic Web Technologies for Knowledge-Driven Querying of Biomedical Data	267
<i>Martin O'Connor, Ravi Shankar, Samson Tu, Csongor Nyulas, Dave Parrish, Mark Musen, and Amar Das</i>	
Categorical Representation of Evolving Structure of an Ontology for Clinical Fungus	277
<i>Arash Shaban-Nejad and Volker Haarslev</i>	

Replacing SEP-Triplets in SNOMED CT Using Tractable Description Logic Operators	287
<i>Boontawee Suntisrivaraporn, Franz Baader, Stefan Schulz, and Kent Spackman</i>	
Building an Ontology of Hypertension Management	292
<i>Olivier Steichen, Christel Daniel-Le Bozec, Marie-Christine Jaulent, and Jean Charlet</i>	
Analyzing Differences in Operational Disease Definitions Using Ontological Modeling	297
<i>Linda Peelen, Michel C.A. Klein, Stefan Schlobach, Nicolette F. de Keizer, and Niels Peek</i>	
Decision Support Systems	
Adaptive Optimization of Hospital Resource Calendars	305
<i>I.B. Vermeulen, S.M. Bohte, S.G. Elkhuizen, J.S. Lameris, P.J.M. Bakker, and J.A. La Poutré</i>	
On the Behaviour of Information Measures for Test Selection	316
<i>Danielle Sent and Linda C. van der Gaag</i>	
Nasopharyngeal Carcinoma Data Analysis with a Novel Bayesian Network Skeleton Learning Algorithm	326
<i>Alex Aussem, Sergio Rodrigues de Moraes, and Marilys Corbex</i>	
Enhancing Automated Test Selection in Probabilistic Networks	331
<i>Danielle Sent and Linda C. van der Gaag</i>	
ProCarSur: A System for Dynamic Prognostic Reasoning in Cardiac Surgery	336
<i>Niels Peek, Marion Verduijn, Winston G. Tjon Sjoe-Sjoe, Peter J.M. Rosseel, Evert de Jonge, and Bas A.J.M. de Mol</i>	
Content Collection for the Labelling of Health-Related Web Content ...	341
<i>K. Stamatakis, V. Metsis, V. Karkaletsis, M. Ruzicka, V. Svátek, E. Amigó, M. Pöllä, and C. Spyropoulos</i>	
Bayesian Network Decomposition for Modeling Breast Cancer Detection	346
<i>Marina Velikova, Nivea de Carvalho Ferreira, and Peter Lucas</i>	
A Methodology for Automated Extraction of the Optimal Pathways from Influence Diagrams	351
<i>A.B. Meijer</i>	
Computer-Aided Assessment of Drug-Induced Lung Disease Plausibility	359
<i>Brigitte Séroussi, Jacques Bouaud, Hugette Lioté, and Charles Mayaud</i>	

Applications of AI-Based Image Processing Techniques

Segmentation Techniques for Automatic Region Extraction: An Application to Aphasia Rehabilitation	367
<i>M.G. Albanesi, S. Panzarasa, B. Cattani, S. Dezza, M. Maggi, and S. Quaglini</i>	
A Pattern Recognition Approach to Diagnose Foot Plant Pathologies: From Segmentation to Classification	378
<i>Marco Mora, Mary Carmen Jarur, Leopoldo Pavesi, Eduardo Achu, and Horacio Drut</i>	
A Novel Way of Incorporating Large-Scale Knowledge into MRF Prior Model	388
<i>Yang Chen, Wufan Chen, Pengcheng Shi, Yanqiu Feng, Qianjin Feng, Qingqi Wang, and Zhiyong Huang</i>	

Predictive Modeling of fMRI Brain States Using Functional Canonical Correlation Analysis	393
<i>S. Ghebreab, A.W.M. Smeulders, and P. Adriaans</i>	

Protocols and Guidelines

Formalizing ‘Living Guidelines’ Using LASSIE: A Multi-step Information Extraction Method	401
<i>Katharina Kaiser and Silvia Miksch</i>	

The Role of Model Checking in Critiquing Based on Clinical Guidelines	411
<i>Perry Groot, Arjen Hommersom, Peter Lucas, Radu Serban, Annette ten Teije, and Frank van Harmelen</i>	

Integrating Document-Based and Knowledge-Based Models for Clinical Guidelines Analysis	421
<i>Gersende Georg and Marc Cavazza</i>	

Document-Oriented Views of Guideline Knowledge Bases	431
<i>Samson W. Tu, Shantha Condamoor, Tim Mather, Richard Hall, Neill Jones, and Mark A. Musen</i>	

Maintaining Formal Models of Living Guidelines Efficiently	441
<i>Andreas Seyfang, Begoña Martínez-Salvador, Radu Serban, Jolanda Wittenberg, Silvia Miksch, Mar Marcos, Annette ten Teije, and Kitty Rosenbrand</i>	

A Causal Modeling Framework for Generating Clinical Practice Guidelines from Data	446
<i>Subramani Mani and Constantin Aliferis</i>	

Semantic Web Framework for Knowledge-Centric Clinical Decision Support Systems	451
<i>Sajjad Hussain, Samina Raza Abidi, and Syed Sibte Raza Abidi</i>	
Inference in the Promedas Medical Expert System	456
<i>Bastian Wemmenhove, Joris M. Mooij, Wim Wiegerinck, Martijn Leisink, Hilbert J. Kappen, and Jan P. Neijt</i>	
Computerised Guidelines Implementation: Obtaining Feedback for Revision of Guidelines, Clinical Data Model and Data Flow	461
<i>S. Panzarasa, S. Quaglini, A. Cavallini, S. Marcheselli, M. Stefanelli, and G. Micieli</i>	
Workflow Systems	
Querying Clinical Workflows by Temporal Similarity	469
<i>Carlo Combi, Matteo Gozzi, Jose M. Juarez, Roque Marin, and Barbara Oliboni</i>	
Testing Careflow Process Execution Conformance by Translating a Graphical Language to Computational Logic	479
<i>Federico Chesani, Paola Mello, Marco Montali, and Sergio Storari</i>	
Induction of Partial Orders to Predict Patient Evolutions in Medicine	489
<i>John A. Bohada, David Riaño, and Francis Real</i>	
Interacting Agents for the Risk Assessment of Allergies in Newborn Babies	500
<i>Giorgio Leonardi, Silvana Quaglini, Mara de Amici, Mario Stefanelli, Cristina Torre, and Giorgio Ciprandi</i>	
Author Index	507
