

SpringerBriefs in  
Probability and Mathematical Statistics

Haesung Lee · Wilhelm Stannat · Gerald Trutnau

# Analytic Theory of Itô- Stochastic Differential Equations with Non- smooth Coefficients

Bernoulli Society  
for Mathematical Statistics  
and Probability

Springer

# **SpringerBriefs in Probability and Mathematical Statistics**

## **Editor-in-Chief**

Gesine Reinert, University of Oxford, Oxford, UK

## **Series Editors**

Nina Gantert, Technische Universität München, Munich, Germany

Tailen Hsing, University of Michigan, Ann Arbor, MI, USA

Richard Nickl, University of Cambridge, Cambridge, UK

Sandrine Péché, Université Paris Diderot, Paris, France

Yosef Rinott, Hebrew University of Jerusalem, Jerusalem, Israel

Almut E.D. Veraart, Imperial College London, London, UK

SpringerBriefs present concise summaries of cutting-edge research and practical applications across a wide spectrum of fields. Featuring compact volumes of 50 to 125 pages, the series covers a range of content from professional to academic. Briefs are characterized by fast, global electronic dissemination, standard publishing contracts, standardized manuscript preparation and formatting guidelines, and expedited production schedules.

Typical topics might include:

- A timely report of state-of-the art techniques
- A bridge between new research results, as published in journal articles, and a contextual literature review
- A snapshot of a hot or emerging topic
- Lecture of seminar notes making a specialist topic accessible for non-specialist readers
- SpringerBriefs in Probability and Mathematical Statistics showcase topics of current relevance in the field of probability and mathematical statistics

Manuscripts presenting new results in a classical field, new field, or an emerging topic, or bridges between new results and already published works, are encouraged. This series is intended for mathematicians and other scientists with interest in probability and mathematical statistics. All volumes published in this series undergo a thorough refereeing process.

The SBPMS series is published under the auspices of the Bernoulli Society for Mathematical Statistics and Probability.

All titles in this series are peer-reviewed to the usual standards of mathematics and its applications.

# Acknowledgments

The research of Haesung Lee was supported by the Basic Science Research Program through the National Research Foundation of Korea (NRF) funded by the Ministry of Education (2020R1A6A3A01096151) and by the DFG through the IRTG 2235 “Searching for the regular in the irregular: Analysis of singular and random systems.” The research of Wilhelm Stannat was partially supported by the DFG through the Research Unit FOR 2402 “Rough paths, stochastic partial differential equations and related topics.” The research of Gerald Trutnau was supported by the Basic Science Research Program through the National Research Foundation of Korea (NRF) funded by the Ministry of Education (2017R1D1A1B03035632).

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Methods and Results	3
1.2	Organization of the Book	7
<b>2</b>	<b>The Abstract Cauchy Problem in <math>L^r</math>-Spaces with Weights</b>	9
2.1	The Abstract Setting, Existence and Uniqueness	9
2.1.1	Framework and Basic Notations	12
2.1.2	Existence of Maximal Extensions on $\mathbb{R}^d$	15
2.1.3	Uniqueness of Maximal Extensions on $\mathbb{R}^d$	24
2.2	Existence and Regularity of Densities to Infinitesimally Invariant Measures	37
2.2.1	Class of Admissible Coefficients and the Main Theorem	37
2.2.2	Proofs	40
2.2.3	Discussion	43
2.3	Regular Solutions to the Abstract Cauchy Problem	44
2.4	Irreducibility of Solutions to the Abstract Cauchy Problem	52
2.5	Comments and References to Related Literature	56
<b>3</b>	<b>Stochastic Differential Equations</b>	59
3.1	Existence	59
3.1.1	Regular Solutions to the Abstract Cauchy Problem as Transition Functions	59
3.1.2	Construction of a Hunt Process	62
3.1.3	Krylov-type Estimate	70
3.1.4	Identification of the Stochastic Differential Equation	73
3.2	Global Properties	79
3.2.1	Non-explosion Results and Moment Inequalities	80
3.2.2	Transience and Recurrence	91
3.2.3	Long Time Behavior: Ergodicity, Existence and Uniqueness of Invariant Measures, Examples/Counterexamples	98

3.3 Uniqueness .....	103
3.3.1 Pathwise Uniqueness and Strong Solutions .....	104
3.3.2 Uniqueness in Law (Via $L^1$ -Uniqueness) .....	111
3.4 Comments and References to Related Literature .....	115
<b>4 Conclusion and Outlook</b> .....	<b>117</b>
<b>References</b> .....	<b>121</b>
<b>Index</b> .....	<b>125</b>
