Foreword

Organizing the European Conference on Computer Vision (ECCV 2022) in Tel-Aviv during a global pandemic was no easy feat. The uncertainty level was extremely high, and decisions had to be postponed to the last minute. Still, we managed to plan things just in time for ECCV 2022 to be held in person. Participation in physical events is crucial to stimulating collaborations and nurturing the culture of the Computer Vision community.

There were many people who worked hard to ensure attendees enjoyed the best science at the 16th edition of ECCV. We are grateful to the Program Chairs Gabriel Brostow and Tal Hassner, who went above and beyond to ensure the ECCV reviewing process ran smoothly. The scientific program includes dozens of workshops and tutorials in addition to the main conference and we would like to thank Leonid Karlinsky and Tomer Michaeli for their hard work. Finally, special thanks to the web chairs Lorenzo Baraldi and Kosta Derpanis, who put in extra hours to transfer information fast and efficiently to the ECCV community.

We would like to express gratitude to our generous sponsors and the Industry Chairs, Dimosthenis Karatzas and Chen Sagiv, who oversaw industry relations and proposed new ways for academia-industry collaboration and technology transfer. It's great to see so much industrial interest in what we're doing!

Authors' draft versions of the papers appeared online with open access on both the Computer Vision Foundation (CVF) and the European Computer Vision Association (ECVA) websites as with previous ECCVs. Springer, the publisher of the proceedings, has arranged for archival publication. The final version of the papers is hosted by SpringerLink, with active references and supplementary materials. It benefits all potential readers that we offer both a free and citeable version for all researchers, as well as an authoritative, citeable version for SpringerLink readers. Our thanks go to Ronan Nugent from Springer, who helped us negotiate this agreement. Last but not least, we wish to thank Eric Mortensen, our publication chair, whose expertise made the process smooth.

Preface

Welcome to the proceedings of the European Conference on Computer Vision (ECCV 2022). This was a hybrid edition of ECCV as we made our way out of the COVID-19 pandemic. The conference received 5804 valid paper submissions, compared to 5150 submissions to ECCV 2020 (a 12.7% increase) and 2439 in ECCV 2018. 1645 submissions were accepted for publication (28%) and, of those, 157 (2.7% overall) as orals.

846 of the submissions were desk-rejected for various reasons. Many of them because they revealed author identity, thus violating the double-blind policy. This violation came in many forms: some had author names with the title, others added acknowledgments to specific grants, yet others had links to their github account where their name was visible. Tampering with the LaTeX template was another reason for automatic desk rejection.

ECCV 2022 used the traditional CMT system to manage the entire double-blind reviewing process. Authors did not know the names of the reviewers and vice versa. Each paper received at least 3 reviews (except 6 papers that received only 2 reviews), totalling more than 15,000 reviews.

Handling the review process at this scale was a significant challenge. To ensure that each submission received as fair and high-quality reviews as possible, we recruited more than 4719 reviewers (in the end, 4719 reviewers did at least one review). Similarly we recruited more than 276 area chairs (eventually, only 276 area chairs handled a batch of papers). The area chairs were selected based on their technical expertise and reputation, largely among people who served as area chairs in previous top computer vision and machine learning conferences (ECCV, ICCV, CVPR, NeurIPS, etc.).

Reviewers were similarly invited from previous conferences, and also from the pool of authors. We also encouraged experienced area chairs to suggest additional chairs and reviewers in the initial phase of recruiting. The median reviewer load was five papers per reviewer, while the average load was about four papers, because of the emergency reviewers. The area chair load was 35 papers, on average.

Conflicts of interest between authors, area chairs, and reviewers were handled largely automatically by the CMT platform, with some manual help from the Program Chairs. Reviewers were allowed to describe themselves as senior reviewer (load of 8 papers to review) or junior reviewers (load of 4 papers). Papers were matched to area chairs based on a subject-area affinity score computed in CMT and an affinity score computed by the Toronto Paper Matching System (TPMS). TPMS is based on the paper's full text. An area chair handling each submission would bid for preferred expert reviewers, and we balanced load and prevented conflicts.

The assignment of submissions to area chairs was relatively smooth, as was the assignment of submissions to reviewers. A small percentage of reviewers were not happy with their assignments in terms of subjects and self-reported expertise. This is an area for improvement, although it's interesting that many of these cases were reviewers hand-picked by AC's. We made a later round of reviewer recruiting, targeted at the list of authors of papers submitted to the conference, and had an excellent response which

helped provide enough emergency reviewers. In the end, all but six papers received at least 3 reviews.

The challenges of the reviewing process are in line with past experiences at ECCV 2020. As the community grows, and the number of submissions increases, it becomes ever more challenging to recruit enough reviewers and ensure a high enough quality of reviews. Enlisting authors by default as reviewers might be one step to address this challenge.

Authors were given a week to rebut the initial reviews, and address reviewers' concerns. Each rebuttal was limited to a single pdf page with a fixed template.

The Area Chairs then led discussions with the reviewers on the merits of each submission. The goal was to reach consensus, but, ultimately, it was up to the Area Chair to make a decision. The decision was then discussed with a buddy Area Chair to make sure decisions were fair and informative. The entire process was conducted virtually with no in-person meetings taking place.

The Program Chairs were informed in cases where the Area Chairs overturned a decisive consensus reached by the reviewers, and pushed for the meta-reviews to contain details that explained the reasoning for such decisions. Obviously these were the most contentious cases, where reviewer inexperience was the most common reported factor.

Once the list of accepted papers was finalized and released, we went through the laborious process of plagiarism (including self-plagiarism) detection. A total of 4 accepted papers were rejected because of that.

Finally, we would like to thank our Technical Program Chair, Pavel Lifshits, who did tremendous work behind the scenes, and we thank the tireless CMT team.

Contents – Part XV

WaveGAN: Frequency-Aware GAN for High-Fidelity Few-Shot Image Generation	1
<i>Mengping Yang, Zhe Wang, Ziqiu Chi, and Wenyi Feng</i>	
End-to-End Visual Editing with a Generatively Pre-trained Artist	18
<i>Andrew Brown, Cheng-Yang Fu, Omkar Parkhi, Tamara L. Berg, and Andrea Vedaldi</i>	
High-Fidelity GAN Inversion with Padding Space	36
<i>Qingyan Bai, Yinghao Xu, Jiapeng Zhu, Weihao Xia, Yujiu Yang, and Yujun Shen</i>	
Designing One Unified Framework for High-Fidelity Face Reenactment and Swapping	54
<i>Chao Xu, Jiangning Zhang, Yue Han, Guanzhong Tian, Xianfang Zeng, Ying Tai, Yabiao Wang, Chengjie Wang, and Yong Liu</i>	
Sobolev Training for Implicit Neural Representations with Approximated Image Derivatives	72
<i>Wentao Yuan, Qingtian Zhu, Xiangyue Liu, Yikang Ding, Haotian Zhang, and Chi Zhang</i>	
Make-A-Scene: Scene-Based Text-to-Image Generation with Human Priors	89
<i>Oran Gafni, Adam Polyak, Oron Ashual, Shelly Sheynin, Devi Parikh, and Yaniv Taigman</i>	
3D-FM GAN: Towards 3D-Controllable Face Manipulation	107
<i>Yuchen Liu, Zhixin Shu, Yijun Li, Zhe Lin, Richard Zhang, and S. Y. Kung</i>	
Multi-Curve Translator for High-Resolution Photorealistic Image Translation	126
<i>Yuda Song, Hui Qian, and Xin Du</i>	
Deep Bayesian Video Frame Interpolation	144
<i>Zhiyang Yu, Yu Zhang, Xujie Xiang, Dongqing Zou, Xijun Chen, and Jimmy S. Ren</i>	
Cross Attention Based Style Distribution for Controllable Person Image Synthesis	161
<i>Xinyue Zhou, Mingyu Yin, Xinyuan Chen, Li Sun, Changxin Gao, and Qingli Li</i>	

KeypointNeRF: Generalizing Image-Based Volumetric Avatars Using Relative Spatial Encoding of Keypoints	179
<i>Marko Mihajlovic, Aayush Bansal, Michael Zollhöfer, Siyu Tang, and Shunsuke Saito</i>	
ViewFormer: NeRF-Free Neural Rendering from Few Images Using Transformers	198
<i>Jonáš Kulháněk, Erik Derner, Torsten Sattler, and Robert Babuška</i>	
L-Tracing: Fast Light Visibility Estimation on Neural Surfaces by Sphere Tracing	217
<i>Ziyu Chen, Chenjing Ding, Jianfei Guo, Dongliang Wang, Yikang Li, Xuan Xiao, Wei Wu, and Li Song</i>	
A Perceptual Quality Metric for Video Frame Interpolation	234
<i>Qiqi Hou, Abhijay Ghildyal, and Feng Liu</i>	
Adaptive Feature Interpolation for Low-Shot Image Generation	254
<i>Mengyu Dai, Haibin Hang, and Xiaoyang Guo</i>	
PalGAN: Image Colorization with Palette Generative Adversarial Networks ...	271
<i>Yi Wang, Menghan Xia, Lu Qi, Jing Shao, and Yu Qiao</i>	
Fast-Vid2Vid: Spatial-Temporal Compression for Video-to-Video Synthesis	289
<i>Long Zhuo, Guangcong Wang, Shikai Li, Wayne Wu, and Ziwei Liu</i>	
Learning Prior Feature and Attention Enhanced Image Inpainting	306
<i>Chenjie Cao, Qiaole Dong, and Yanwei Fu</i>	
Temporal-MPI: Enabling Multi-plane Images for Dynamic Scene Modelling via Temporal Basis Learning	323
<i>Wenpeng Xing and Jie Chen</i>	
3D-Aware Semantic-Guided Generative Model for Human Synthesis	339
<i>Jichao Zhang, Enver Sangineto, Hao Tang, Aliaksandr Siarohin, Zhun Zhong, Nicu Sebe, and Wei Wang</i>	
Temporally Consistent Semantic Video Editing	357
<i>Yiran Xu, Badour AlBahar, and Jia-Bin Huang</i>	
Error Compensation Framework for Flow-Guided Video Inpainting	375
<i>Jaeyeon Kang, Seoung Wug Oh, and Seon Joo Kim</i>	

<p>Scraping Textures from Natural Images for Synthesis and Editing</p> <p style="padding-left: 2em;"><i>Xueting Li, Xiaolong Wang, Ming-Hsuan Yang, Alexei A. Efros, and Sifei Liu</i></p> <p>Single Stage Virtual Try-On Via Deformable Attention Flows</p> <p style="padding-left: 2em;"><i>Shuai Bai, Huiling Zhou, Zhikang Li, Chang Zhou, and Hongxia Yang</i></p> <p>Improving GANs for Long-Tailed Data Through Group Spectral Regularization</p> <p style="padding-left: 2em;"><i>Harsh Rangwani, Naman Jaswani, Tejan Karmali, Varun Jampani, and R. Venkatesh Babu</i></p> <p>Hierarchical Semantic Regularization of Latent Spaces in StyleGANs</p> <p style="padding-left: 2em;"><i>Tejan Karmali, Rishubh Parihar, Susmit Agrawal, Harsh Rangwani, Varun Jampani, Maneesh Singh, and R. Venkatesh Babu</i></p> <p>IntereStyle: Encoding an Interest Region for Robust StyleGAN Inversion</p> <p style="padding-left: 2em;"><i>Seung-Jun Moon and Gyeong-Moon Park</i></p> <p>StyleLight: HDR Panorama Generation for Lighting Estimation and Editing</p> <p style="padding-left: 2em;"><i>Guangcong Wang, Yinuo Yang, Chen Change Loy, and Ziwei Liu</i></p> <p>Contrastive Monotonic Pixel-Level Modulation</p> <p style="padding-left: 2em;"><i>Kun Lu, Rongpeng Li, and Honggang Zhang</i></p> <p>Learning Cross-Video Neural Representations for High-Quality Frame Interpolation</p> <p style="padding-left: 2em;"><i>Wentao Shangguan, Yu Sun, Weijie Gan, and Ulugbek S. Kamilov</i></p> <p>Learning Continuous Implicit Representation for Near-Periodic Patterns</p> <p style="padding-left: 2em;"><i>Bowei Chen, Tiancheng Zhi, Martial Hebert, and Srinivasa G. Narasimhan</i></p> <p>End-to-End Graph-Constrained Vectorized Floorplan Generation with Panoptic Refinement</p> <p style="padding-left: 2em;"><i>Jiachen Liu, Yuan Xue, Jose Duarte, Krishnendra Shekhawat, Zihan Zhou, and Xiaolei Huang</i></p> <p>Few-Shot Image Generation with Mixup-Based Distance Learning</p> <p style="padding-left: 2em;"><i>Chaerin Kong, Jeesoo Kim, Donghoon Han, and Nojun Kwak</i></p> <p>A Style-Based GAN Encoder for High Fidelity Reconstruction of Images and Videos</p> <p style="padding-left: 2em;"><i>Xu Yao, Alasdair Newson, Yann Gousseau, and Pierre Hellier</i></p>	<p>391</p> <p>409</p> <p>426</p> <p>443</p> <p>460</p> <p>477</p> <p>493</p> <p>511</p> <p>529</p> <p>547</p> <p>563</p> <p>581</p>
--	---

FakeCLR: Exploring Contrastive Learning for Solving Latent Discontinuity in Data-Efficient GANs	598
<i>Ziqiang Li, Chaoyue Wang, Heliang Zheng, Jing Zhang, and Bin Li</i>	
BlobGAN: Spatially Disentangled Scene Representations	616
<i>Dave Epstein, Taesung Park, Richard Zhang, Eli Shechtman, and Alexei A. Efros</i>	
Unified Implicit Neural Stylization	636
<i>Zhiwen Fan, Yifan Jiang, Peihao Wang, Xinyu Gong, Dejia Xu, and Zhangyang Wang</i>	
GAN with Multivariate Disentangling for Controllable Hair Editing	655
<i>Xuyang Guo, Meina Kan, Tianle Chen, and Shiguang Shan</i>	
Discovering Transferable Forensic Features for CNN-Generated Images Detection	671
<i>Keshigeyan Chandrasegaran, Ngoc-Trung Tran, Alexander Binder, and Ngai-Man Cheung</i>	
Harmonizer: Learning to Perform White-Box Image and Video Harmonization	690
<i>Zhanghan Ke, Chunyi Sun, Lei Zhu, Ke Xu, and Rynson W. H. Lau</i>	
Text2LIVE: Text-Driven Layered Image and Video Editing	707
<i>Omer Bar-Tal, Dolev Ofri-Amar, Rafail Fridman, Yoni Kasten, and Tali Dekel</i>	
Digging into Radiance Grid for Real-Time View Synthesis with Detail Preservation	724
<i>Jian Zhang, Jinchi Huang, Bowen Cai, Huan Fu, Mingming Gong, Chaohui Wang, Jiaming Wang, Hongchen Luo, Rongfei Jia, Binqiang Zhao, and Xing Tang</i>	
Author Index	741
