Preface

Young brains come to school to learn, older brains come to school to teach them. At least, that's the ideal. The rationale for writing this book were the questions: *can cognitive neuroscience tell us anything about how young brains learn from older brains, and therefore how older brains should teach younger brains for optimal effect?* (Geake, 2009); and, additionally: *can AI and the theory of cybernetics add something important to this process?*

The system of knowledge between younger and older brains changes in such a way as to distribute the knowledge between the two. By way of analogy, a similar thing can be said about the system of transferring the knowledge between one brain (the teacher) and several brains (students in a class), which is what goes on in traditional school settings. Since this is true of both biological as well as non-biological systems, the question may be asked, how would it be possible to optimally organize this kind of transfer even between the two, i.e., between biological and non-biological systems, that is, in an interaction between the natural (teachers' and learners') and the "artificial", AI-based brain? Further, we may ask whether the explorations in this field serve as the basis for the further development of mankind as a whole, or whether they apply only to the specific field of AI?

Knowing that, in general, the educational system at the primary level follows social change with a time lag of around 15–20 years (Aberšek et al., 2014), it becomes apparent that in order to track the changes that are going to be brought about by contemporary society, we must adapt our educational systems to them as soon as possible. This is especially relevant in those fields where changes occur most rapidly, one of them being STEM (science, technology, engineering, and mathematics). Knowledge in contemporary societies of the twenty-first century should, in a broad outline, be based on the following:

- *Competency-based developmental knowledge* from the fields of cybernetic physical systems (robots) and the internet of things, connected to the internet of people. In short, we need specialized engineering (STEM) knowledge, upgraded through digital literacy 4.0 (communication between people, communication

between man and machine, and understanding the communication between machines themselves).

- *Interoperability* requires communication competence 4.0, which does not simply refer to communication between people, but also to the skills associated with man-machine communication, as well as the understanding of AI.
- *Competence in systems development* (for as long as this is done by humans, or until such tasks will become a matter of AI), which supports people's decision-making processes in complex situations, by means of visualization and data mining processes. At the same time, we must also develop the competence of solving complex problems in real time (critical assessment, critical decision-making, critical thinking).
- *Decentralized decision-making*, which means that the majority of decisions will be made by machines themselves by means of various algorithms and AI (as is done today by, for example, Google's filters). A person's role will be to make decisions only in "critical, poorly defined situations", when such algorithms (could) fail.

To sum up, the demands placed upon our educational system are clear and unambiguous. In this book, we will embark on the long journey of providing potential explanations of how to meet these requirements optimally. Thus, the primary purpose of this book is to shed light on issues related to teaching and learning based on contemporary trends and approaches from the field of information and communications technologies. Furthermore, our goal is to relate the above to the set-up of modern learning environments, whether they are referred to as intelligent learning materials (e-learning materials), intelligent tutoring systems (ITS), or learning management systems (LMS). With this in mind, a universal meta-model (cognitive machine) for a contemporary transdisciplinary learning strategy (transdisciplinary paradigm) will be proposed, based on cybernetic theory.

Acknowledgments

The author gratefully wishes to acknowledge:

- The Ministry of Education, Science and Sport and Research Agency of the Republic of Slovenia for their financial support.
- All of our colleagues from the Faculty of Arts, the Faculty of Natural Sciences and Mathematics, and the Faculty of Education, University of Maribor, and from the Institute of Anton Martin Slomšek, for their contribution and helpful comments. Thanks to Bojan Borstner, Janez Bregant and Milan Kotnik for all our conversations, in which we invented questions and jointly examined our intuitive answers. I am greatly indebted also to all our students, for their inspiration and assistance, especially Urška and Dejan.
- Many thanks to Helena Fošnjar for translation and proofreading.

The author wishes to express his appreciation to all those who have ensured the quality of this book. Last but not least, thanks to ours **M/J**, who has inspired us, supported us, and given us the opportunity to be who we are.

Contents

1	Introduction	1
2	Philosophical and Social Realm	7
2.1	Storys for Introduction	8
2.1.1	The Human Story	8
2.1.2	The ALF Story (Tilden Approach?)	11
2.1.3	Another ALF Story ChatGPT (Asimov Approach?)	16
2.1.4	Conclusion	17
2.2	Human as a Social Being	17
2.2.1	From the Sociological to the Anthropological Level	21
2.2.2	An Advanced View on the Philosophy of Mind	25
2.2.3	Explanatory Gap	28
2.2.4	Philosophy of Mind, Science, Technology and Engineering in Education	30
2.2.5	Technology and Engineering Literacy	32
2.2.6	Conclusion	34
2.3	Cognitive Science and Neuroscience	35
2.3.1	Cognitive Science	35
2.3.2	Intelligence and Behaviour	36
2.3.3	Intelligence	36
2.3.4	Social or Interpersonal Intelligence	39
2.3.5	Intelligence, Creativity and Talent	40
2.3.6	Conclusion	42
2.4	Artificial Intelligence	43
2.4.1	The Beginning of AI – Weak AI	45
2.4.2	The Limitations of Symbolic Computation	47
2.4.3	Interpretation of Research	49
2.4.4	Intelligent Agents	51
2.4.5	Sentient Machines or Strong AI	54
2.4.6	Awareness About the Existence of ALF	60
2.4.7	Construal Level Theory	61

2.4.8	Construal Level Theory and the Theory of Chaos	62
2.4.9	A Historical Understanding of How Science Works	63
2.4.10	Conclusion	65
2.5	Cognitive Modelling and Learning Theory	65
2.5.1	Neuroscience	66
2.5.2	Basic Structure of the Nervous System	67
2.5.3	Anatomy of the Brain.	69
2.5.4	Neurons	72
2.5.5	Artificial Neural Networks and Learning	77
2.5.6	Neuroscience, Learning and Memory	78
2.5.7	Plasticity.	79
2.5.8	The Organization of Memory	80
2.5.9	Conclusion	82
2.6	From Cognitive Science to Cognitive Neuroscience	82
2.6.1	Cognitive Science	82
2.6.2	Cognitive Science Then and Now	83
2.6.3	Classical Cognitive Science and Symbolic Models.	84
2.6.4	Cognitive Neuroscience.	85
2.6.5	Cognitive Modeling and Cognitive Architecture.	86
2.6.6	The Development of Cognitive Architecture.	88
2.6.7	Applications of Cognitive Architectures	89
2.6.8	Conclusion	90
2.7	Learning	91
2.7.1	Naturalism	94
2.7.2	Developing Social Competence and Critical Thinking	95
2.7.3	Learning and Cognitive Modeling	98
2.7.4	Information-Theoretic or Cybernetic Basis of Learning	99
2.7.5	The Learning Process in Cybernetic Didactics	103
2.7.6	Mistakes in Cybernetic Pedagogy	107
2.7.7	Cognitive Neuroscience and Reverse Engineering	110
2.7.8	Cognitive Science and Neuromorphic Engineering.	111
2.7.9	Cognitive Science and the Integrated Approach	113
2.7.10	Education and Today's Technological World.	113
2.7.11	How Does Learning with Technology Work?	115
2.7.12	Conclusion	117
3	From Human to Machine.	119
3.1	Education, AI and Cognitive Modelling	119
3.1.1	Philosophical View on Artificial Intelligence (AI).	119
3.1.2	Symbol Systems for Cognitive Modelling	120
3.1.3	Symbol Manipulation	124
3.1.4	Ethics in Technological Development	125
3.1.5	Scale of Malice and AI Illiteracy	127
3.1.6	Morality, Machines and Education	127

- 3.1.7 The Hard Problem – The Ethics of (Strong) AI in Education 133
- 3.1.8 Implementation of AI in Education 134
- 3.1.9 The Possibilities of Using AI in Education 136
- 3.1.10 Conclusion 142
- 3.2 Philosophical Realm and Machine Behavior. 142
 - 3.2.1 Machine Behavior as a Transdisciplinary Science. 143
 - 3.2.2 Introduction to Machine Behavior. 144
 - 3.2.3 From Interdisciplinarity to Transdisciplinarity 144
 - 3.2.4 Transdisciplinarity 145
 - 3.2.5 The Birth of a New Transdisciplinary Science – Machine Behavior 147
 - 3.2.6 The Science of Machine Behavior. 148
 - 3.2.7 The Transdisciplinary Study of Machine Behavior. 149
 - 3.2.8 From Biological Behavior to Machine Behavior. 151
 - 3.2.9 Machine Behavior Ecosystem 151
 - 3.2.10 Individual Machine Behavior. 152
 - 3.2.11 Collective Intelligence and Machine Behavior 153
 - 3.2.12 Hybrid Human-Machine Behavior 155
 - 3.2.13 Conclusion 158
- 3.3 Collective Machine Behavior. 158
 - 3.3.1 Case Study: Modelling Collective Behavior Based on the Concept of Learning Agents. 163
 - 3.3.2 Learning-Agent-Based Models 164
 - 3.3.3 A Formal Model of Learning Agents. 165
 - 3.3.4 The Environment Model 168
 - 3.3.5 Agents with Fixed Behavioral Dispositions. 169
 - 3.3.6 Conclusion 170
- 4 Technological Relations 171**
 - 4.1 Artificial Intelligence for Cognitive Modeling 172
 - 4.1.1 Data Science. 172
 - 4.1.2 Statistical Analysis. 173
 - 4.1.3 Data Science and AI. 173
 - 4.1.4 What Is Data Mining? 173
 - 4.1.5 Data Mining vs. Machine Learning. 174
 - 4.1.6 Machine Learning and AI 174
 - 4.1.7 What Is Machine Learning?. 176
 - 4.1.8 Machine Learning in the Context of AI. 177
 - 4.1.9 Supervised Learning 178
 - 4.1.10 Unsupervised Learning 179
 - 4.1.11 Reinforcement Learning 179
 - 4.1.12 Conclusion 180

- 4.2 Connectionism and Deep Learning 180
 - 4.2.1 Artificial Neural Networks. 182
 - 4.2.2 Applications of Symbolic AI 183
 - 4.2.3 Early Education Smart Systems (Weak AI). 184
 - 4.2.4 Non-symbolic AI 196
 - 4.2.5 Conclusion 196
- 4.3 Deep Learning and Formal Neural Networks 197
 - 4.3.1 Transfer Learning (Experienc Based Learning). 199
 - 4.3.2 Machine Learning Algorithm and Transfer Learning 199
 - 4.3.3 Using Transfer Learning in MI 200
 - 4.3.4 Benefits of Transfer Learning 200
 - 4.3.5 Differences Between Machine Learning
and Deep Learning. 201
 - 4.3.6 But What About Coding?. 202
 - 4.3.7 AI as Science Today. 203
 - 4.3.8 What Seems Possible and What Not? 204
 - 4.3.9 Symbolic AI vs. Non-symbolic AI. 206
 - 4.3.10 Conclusion 208
- 5 Summary and Conclusions. 209**
 - 5.1 The Difference Between COVID-19, Environmental Problems
and AI. 211
- References 219**
- Index. 227**
