INTERNATIONAL BESTSELLER

JAVA™ by example

SECOND EDITION

- **New** coverage of Remote Methods Invocation (RMI) and JDBC
- **Learn** Java from even more examples written by experts
- The best book to get started quickly—covers applications and applets

"...the most complete and effective treatment of a programming topic since Charles Petzold's classic Programming Windows."

SunSoft Press
A Prentice Hall Title

Contents

List of Tables, xix
List of Examples, xxi
List of Figures, xxv
Preface, xxvii
Why We Are Here, xxvii
Audience, xxviii
For Windows 3.1 Programmers, xxix
For Mac Programmers, xxix
For C Programmers, xxix
Internet Sources of Information, xxix
Conventions Used in This Book, xxx
Applets, Applications, and Programming Aids, xxxi
Java by Example CD Contents, xxxii
Using the Java by Example CD-ROM, xxxiii
Acknowledgments, xxxix

Part 1—Working With the Java Language

Chapter 1

About Java, 3

What Is Java?, 3
Java and the World-Wide Web, 4
The Java Compiler and the Java Interpreter, 4
The Applet Viewer Program, 4
Applications and Applets, 5
Writing, Compiling, and Running an Application, 5
Writing, Compiling, and Viewing an Applet, 6
Incorporating Applets Into a Web Page, 7
Summary, 8

Chapter 2

Beginning With a Program, 11

A Line Counter Program, 11
A Closer Look at the Line Counter, 14
Output From the Line Counter, 18
Summary, 18

Chapter 3

The Java Language Structure, 21

Introduction, 21
Classes and Methods, 21
Instance Methods, 25
Class Methods, 26
The main() Method, 27
Overriding Methods, 27
Abstract Methods, 30
Native Methods, 31
Final Methods, 32

Method Modifiers and Their Scope, 32
Scope of a public Method, 34
Scope of a private Method, 34
Scope of a friendly Method, 34
Scope of a protected Method, 35
Variables, 36
Variable Type, 36
Variable Modifiers, 37
Variable Scope and Extent, 37
Instance Variables, 39
Class Variables, 40
Local Variables, 41
Constants, 41
Variables, Methods, and Superclasses, 42
Static Initializers, 42
Packages and the import Statement, 43
Summary, 45

Chapter 4
Memory and Constructors, 47

Dynamic Allocation and Garbage Collection, 47
The new Operator and Constructors, 48
Using Multiple Constructors Within a Class, 51
The Default Constructor, 52
Using super and this in Constructors, 52
Finalization, 54
A Sample Program Showing Linked Lists in Java, 54
The LongMult Class and the main() Method, 57
The BigNum Class, 58
The NumNode Class, 65
The BigNumFormatException Class, 65

Output From the Long Multiplier Program, 65
Summary, 65

Chapter 5
Interfaces as Types, 67

What Is an Interface?, 67
Why Use an Interface?, 68
Using Interfaces, 70
Extending Interfaces, 73
A Sample Program Using Interfaces, 73
The TreeSort Class and the main() Method, 76
The Tree Class, 79
The TreeNode Class, 80
The InorderEnumeration Class, 82
The TreeKey Interface, 83
Sample Output From the Tree Sort Program, 84
Summary, 85

Chapter 6
Arrays, 87

Basics of Java Arrays, 87
Arrays of Objects, 88
Multidimensional Arrays, 89
C++ Style Array Initialization, 90
Alternative Array Declaration Syntax, 90
Arrays in the Object Hierarchy, 91
Summary, 92

Chapter 7
Exception Handling, 95

Exceptional Conditions, 95
Problems Using Return Codes for Error Processing, 95

Catching and Throwing Exceptions, 98
try and catch, 98
The finally Statement, 99
The throw Statement, 100
Errors, 101
Declaring Exceptions, 102
Runtime Exceptions, 103
Remote Exceptions, 103
Summary, 104

Chapter 8
nput/Output, 107

Introduction, 107
Java I/O Classes and Wrappers, 107
Standard Streams for a Java Program, 109
Printing Text Output in Java, 109
Reading Text Input in Java, 112
Reading Characters, 112
Reading an Array of Bytes, 112
Output of the CopyFile Program, 114
Reading Text a Line at a Time, 114
Output of the CopyTextFile Program, 116
Reading a Token at a Time, 116
Output of the TokenizerText Program, 118
File Input and Output in Java, 118
Output of the AppendTextFile Program, 120
Data Input and Output in Java, 120
Summary, 120

Chapter 9

Runtime Typing, Class Loading, and Native Methods, 123

Introduction, 123
Variable Types and Their Values, 123
The instanceof Operator, 125
Type Casting, 126
Class Loading at Runtime, 127
Class Loaders, 128
Linking With C Code, 129
Declaring Native Methods, 130
Generating Include Files, 130
Generating Stub Functions, 133
Building a Library, 134
Linking a Library Into Java, 134
Examples, 134
Using Native Methods, Example 1, 135
Using Native Methods, Example 2, 138
Using Native Methods, Example 3, 138
Summary, 140

Chapter 10

Multiple Threads of Execution, 143

Introduction, 143
Creating Threads, 144
Extending the Thread Class, 144
Implementing the Runnable Interface, 145
Resource Locking, 146
Using the synchronized Modifier, 146
Using synchronized Blocks, 147
Summary, 148

Chapter 11
Putting the Language Pieces Together, 151

Four-Function Calculator, 151

The Calculator main() Method, 153
The Calculator Class, 153
The Reader Class, 157
The ExitException Class, 163
The Displayable Interface, 163
The Processable Interface, 163
The ProcessableCharacter Class, 164
The ProcessableDouble Class, 165
The CalcStack Class, 166
The CalcStackItem Interface, 167

Output From the Calculator Program, 168

Summary, 168

Chapter 12
Remote Method Invocation, 171

What is Remote Method Invocation?, 171

How RMI Works, 171

Calling Remote Methods, 173

The RemOp Interface, 174
The RemImpl Class, 174
Running the rmi1 Example, 176

Building RMI Applications, 176

Defining Interfaces, 177
Creating Classes That Implement the Interfaces, 177
Creating Stub and Skeleton Classes, 178

Passing Arguments to Remote Methods, 178

The Action Interface, 183
The ServerAction Class, 183
The ClientAction Interface, 184

The RemoteCaller Interface, 184
The RemoteCallerImpl Class, 185
The ClientActionImpl Class, 186
Running the rmi2 Example, 187
Managing Multiple RMI Client Processes, 187
The ActionTestSet Class, 188
The ClientActionImpl Class, 189
The RemoteCaller Interface, 191
The RemoteCallerImpl Class, 191
Running the rmi3 Example, 192
RMI and Threads, 193
The ActionTestSet Class, 195
The ClientActionImpl Class, 196
Running the rmi4 Example, 197
Registries, 198
Finding Objects in a Registry, 198
Changing the Contents of a Registry, 199
Garbage Collection of Remote References, 200
Maintaining Object References Across Multiple Processes, 200
The Builder Interface, 204
The BuildImp Class, 204
The RemNode Interface, 205
The NodeImpl Class, 206
Running the rmi5 Example, 207
Summary, 208

Chapter 13
Java Database Connectivity, 211

What is Java Database Connectivity?, 211
Structure of a JDBC Application, 212
Database Connections, 213

Interacting With a Database, 214
SQL/Java Type Correspondence, 215
Executing Precompiled SQL, 216
Generic get and set Methods, 218
Resources, 219
Metadata, 219
Transactions, 219
Cursors, 219
Exercising the JDBC, 219
Summary, 224

Part 2—Writing Java Applets

Chapter 14
Introduction to Applets, 227

Introduction, 227
Java's Applet Tools and Class Support, 227
Displaying Applet Output, 229
A Simple Applet, 229
Configurable Applets, 230
Displaying a Static Label, 230
Output From the Static Label Applet, 233
Incorporating Images and Sound, 233
Output From the ImageWithSound Applet, 235
Active Applets, 236
Displaying a Flashing Label, 237
Output From the Flashing Label Applet, 241
Summary, 241

INTERNET/JAVA PROGRAMMING

CD-ROM INCLUDED

JAVA™ by example

SECOND EDITION

JERRY R. JACKSON • ALAN L. McCLELLAN

There's no better way to learn Java than by example...

If you're an experienced programmer, *Java by Example* is the quickest way to learn Java. By reviewing example code written by experts, you'll learn the right way to develop Java applets and applications that are elegant, readable, and easy to maintain.

Step-by-step, working from examples, you'll learn valuable techniques for managing memory, I/O, multithreading, exception handling, and interfacing with C programs.

The second edition adds extensive coverage of remote methods invocation (RMI), networking, and database access using the new Java Database Connectivity (JDBC) API.

Java by Example teaches what you need to know, the way you want to learn: from real, working code.

The accompanying CD-ROM gives you all the book's sample code, plus:

- The complete Java Development Kit for Solaris™, Windows 95, Windows NT, and Macintosh
- Java™ WorkShop™ from Sun Microsystems
- Symantec's Café Lite

Learn Java from real, working code! End-to-end coverage includes...

- Memory and constructors
- Input/output
- Threads
- Exception handling
- Threads in applets
- Forms and components
- Animation
- Native methods
- Remote methods invocation (RMI)
- Networking
- JDBC

And much more...

"If you can afford only one Java book, this might be the one to take home from the bookstore."
